
browsercompat API Documentation

Release 0.1.0

Mozilla

Apr 28, 2017

Contents

1 Status	3
2 Development	5
2.1 Installation	5
2.1.1 Install Django Project	5
2.1.2 Install in Heroku	6
2.1.3 Configuring authentication	6
2.1.4 Load Data	7
2.2 Contributing	7
2.2.1 What to work on	8
2.2.2 GitHub workflow	8
2.2.3 Getting translations	9
2.2.4 Extracting strings	9
2.3 Technologies	9
2.4 Entrypoints	9
2.5 v1 BrowserCompat API	10
2.5.1 Resources	10
2.5.2 Change Control Resources	39
2.5.3 History Resources	42
2.5.4 Views	44
2.6 v2 BrowserCompat API	69
2.6.1 Implementation	69
2.6.2 Resources	104
2.6.3 Views	139
2.7 Services	218
2.7.1 Authentication	218
2.7.2 OAuth2 Authentication	219
2.7.3 Data Browser	223
2.7.4 Importer	224
2.8 Tools	224
2.8.1 download_data.py	224
2.8.2 import_mdn.py	224
2.8.3 load_spec_data.py	224
2.8.4 make_doc_requests.py	225
2.8.5 mirror_mdn_features.py	225
2.8.6 run_integration_tests.sh	226

2.8.7	upload_data.py	226
2.9	Issues	226
2.9.1	API Tasks	226
2.9.2	Data Tasks	227
2.9.3	Future Tasks	228
2.9.4	Bugzilla Archive	228
2.10	History	230
2.11	Indices and tables	230

The Browser Compatibility API was a project to support compatibility data on the [Mozilla Developer Network](#). This currently takes the form of browser compatibility tables, such as the one on the [CSS display property page](#). The API would centralize this data, and allow it to be kept consistent across languages and presentations.

The project started in December 2013. The initial goals and requirements are documented on the [MozillaWiki](#).

CHAPTER 1

Status

This project has been cancelled. There have been no code changes since March 2016. In April 2017, we started the process of removing integration from MDN and decommissioning the API server. See the issues page for the status as of March 2016.

As of 2017, these are the current MDN data projects:

- <https://github.com/mdn/browser-compat-data>
- <https://github.com/mdn/data>

CHAPTER 2

Development

Code <https://github.com/mdn/browsercompat>

Data <https://github.com/mdn/browsercompat-data>

Dev Docs <https://browsercompat.readthedocs.org>

<https://github.com/mdn/browsercompat/wiki>

Mailing list <https://lists.mozilla.org/listinfo/dev-mdn>

IRC <irc://irc.mozilla.org/mdndev>

Contents:

Installation

Note: This project has been cancelled, and this information is historical.

Install Django Project

For detailed local installation instructions, including OS-specific instructions, see the [Installation page on the wiki](#).

1. Install system packages and libraries. The required packages are [Python](#) (2.7, 3.4, and/or 3.5), [pip](#) (latest), and [virtualenv](#) (latest). To match production and for a smooth installation of Python packages, install [PostgreSQL](#) (9.2 or later recommended) and [Memcached](#) (latest). [virtualenvwrapper](#) and [autoenv](#) will make your development life easier.
2. Optionally, provision a PostgreSQL database, recommended to match production. The default Django database settings will use a [SQLite](#) database named `db.sqlite3`.
3. Optionally, run [Redis](#) or [Memcached](#) for improved read performance (production uses Redis for caching and for the [Celery](#) backend) The default settings will run without a cache or asynchronous tasks.

4. [Clone project locally.](#)
5. [Create a virtualenv.](#)
6. Install dependencies with `pip install -r requirements/development.txt`.
7. Customize the configuration with environment variables. See `wpcsite/settings.py` and `env.dist` for advice and available settings.
8. Initialize the database and a superuser account with `./manage.py migrate`.
9. Verify that tests pass with `./manage.py test` or `make test`.
10. Run it with `./manage.py runserver` or `./manage.py runserver_plus`.

Install in Heroku

Heroku allows you to quickly deploy browsercompat. Heroku hosts the beta version of the service at <https://browsercompat.herokuapp.com>, using the add-ons:

- [heroku-postgresql](#) (hobby-basic tier, \$9/month, required for size of dataset)
- [memcached](#) (free dev tier)
- [heroku-redis](#) (free hobby-dev tier)
- Mozilla's New Relic account ([Heroku New Relic](#) available, including free Wayne tier)

For more details of the beta server, see [Beta Server](#) on the github wiki.

To deploy with Heroku, you'll need to [signup for a free account](#) and install the [Heroku Toolbelt](#). Then you can:

1. Clone project locally
2. `heroku apps:create`
3. `git push heroku master`
4. See the current config with `heroku config`, and then customize with environment variables using `heroku config:set` (see `wpcsite/settings.py` and `env.dist`)
5. Add superuser account (`heroku run ./manage.py createsuperuser`)

Configuring authentication

The project uses [django-allauth](#) as a framework for local and social authentication. The [public service](#) uses username and password for local authentication, and [Firefox Accounts](#) (FxA) for social authentication.

[django-allauth](#) supports multiple emails per user, with one primary email used for communication. Email addresses are validated by sending a confirmation link. For a public server, you'll need to [configure Django to send email](#), by configuring your mail server and setting environment variables. For local development, it is easiest to print emails to the console:

```
export EMAIL_BACKEND="django.core.mail.backends.console.EmailBackend"
```

[django-allauth](#) supports many social authentication providers. See the [providers documentation](#) for the current list and hints for configuration. Using an authentication provider is not required, especially for local development. Instead, use local authentication with a username and password.

If you need FxA integration, see the [Firefox Accounts](#) page on the [wiki](#) for install hints.

Load Data

There are several ways to get data into your API:

1. Load data from documentation fixtures
2. Load data from the github export
3. Load data from another browsercompat server

Load from documentation fixtures

The integration tests and documentation use a subset of real compatibility data. This subset isn't enough for a local compatibility server, but should be adequate for development work on the API software, and takes less than a minute to load:

1. Run the API (`./manage.py runserver`)
2. Import the data (`tools/upload_data.py --data docs/v1/resources`)

Load from GitHub

The data on browsercompat.herokuapp.com is archived in the [browsercompat-data](https://github.com/mdn/browsercompat-data) github repo, and this is the fastest way to get complete data into your empty API:

1. Clone the github repo (`git clone https://github.com/mdn/browsercompat-data.git`)
2. Run the API (`./manage.py runserver`)
3. Import the data (`tools/upload_data.py --data /path/to/browsercompat-data/data`)

Load from another browsercompat server

If you have read access to a browsercompat server that you'd like to clone, you can grab the data for your own server.

1. Download the data (`tools/download_data.py --api https://browsercompat.example.com`)
2. Run the API (`./manage.py runserver`)
3. Import the data (`tools/upload_data.py`)

Contributing

Note: This project has been cancelled, and this information is historical.

Contributions should follow the [MDN Contribution Guidelines](#), and follow the standards of this project:

- You agree to license your contributions under [MPL 2](#)
- Discuss large changes on the [dev-mdn](#) mailing list or on a [bugzilla](#) bug before coding.
- **Code should follow Python and JavaScript standards.**
 - Python code style should conform to [PEP8 standards](#), as well as [PEP257](#) standards for documentation strings.

- JavaScript code should follow the conventions of [jslint](#).
 - Code can be checked locally with `make lint`, which must pass before a pull request will be considered.
- **All commit messages must start with “bug NNNNNNN” or “fix bug NNNNNNN”**
 - Reason: This makes it possible to read the commit log and find the bug that includes the original request and design conversation for all changes.
 - Exceptions: “Merge” and “Revert” commits
 - “fix bug NNNNNNN” - will trigger a github bot to automatically mark the bugzilla bug as “RESOLVED:FIXED”
 - Multiple commits are allowed, and authors are encouraged to split, merge, and rearrange commits in feature branches to make code review easier. Each commit must start with the “bug” or “fix bug” prefix.
 - **MDN module owner or peer must review and merge all pull requests.**
 - Reason: Owner and peers are accountable for the quality of MDN code changes
 - Exceptions: Owners/peers may commit directly to master for critical security/down-time fixes; they must file a bug for follow-up review.
 - **MDN reviewers must verify 100% test coverage on all changes.**
 - Reason: Automated tests reduce human error involved in reviews, and allow radical refactoring of the code.
 - Notes: The Django site has [good testing docs](#), and [Django REST framework](#) has some [additonal testing docs](#).
 - Coverage can be checked locally with `make coverage`.

What to work on

There is a [tracking bug](#) for this project, and a [specific bug](#) for the data store, the primary purpose of this project. The dependent bugs represent areas of work, and are not exhaustive. If you want to contribute at this phase in development, take a look at the bugs and linked documents, to familiarize yourself with the project, and then get in touch with the team on IRC (#mdndev or #browsercompat on irc.mozilla.org) to carve out a piece of the project.

GitHub workflow

1. Get your environment setup
2. Set up mozilla remote (`$ git remote add mozilla git://github.com/mdn/browsercompat.git`)
3. Create a branch for a bug (`$ git checkout -b new-issue-888888`)
4. Develop on bug branch.
Time passes, the mdn/browsercompat repository accumulates new commits
5. Commit changes to bug branch (`$ git add . ; git commit -m 'fix bug 888888 - commit message'`)
6. Fetch mozilla (`$ git fetch mozilla`)

7. Update local master (`$ git checkout master; git pull mozilla master`)

Repeat steps 4-7 till dev is complete

8. Rebase issue branch (`$ git checkout new-issue-888888; git rebase master`)

9. Push branch to GitHub (`$ git push origin new-issue-888888`)

10. Issue pull request (Click Pull Request button)

Getting translations

Translated strings are stored in `.po` files in the `locales/` directory.

FIXME: When we set up Pontoon, add instructions here for acquiring translations.

Extracting strings

After making changes to strings that need to be translated, you need to re-extract the strings and merge them into the translations files:

```
$ ./manage.py extract  
$ ./manage.py merge
```

FIXME: When we set up Pontoon, add instructions here for committing all the changes to the repository that holds the translations.

Technologies

Note: This project has been cancelled, and this information is historical.

The technologies used to implement the API include:

- [Django](#), a web framework
- [Django REST Framework](#), an API framework
- [django-simple-history](#), for recording changes to models
- [django-mptt](#), for efficiently storing hierarchical data
- [django-oauth2-provider](#), for script-based updates of content

See the [source code](#) for a detailed list.

Entrypoints

Note: This project has been cancelled, and this information is historical.

This entrypoints are

- `/api/v1` - The legacy v1 API, conforming to the deprecated [JSON API](#) RC1 specification.

- /api/v2 - The current v2 API, conforming to the [JSON API v1.0](#) specification.
- /browse - A data browser.
- /importer - A tool for scraping and validating data from [MDN](#).

The APIs support two representations:

application/vnd.api+json (default) JSON in the JSON API format.

text/html The Django REST Framework browsable API.

The API supports user accounts with password and/or [Persona](#) authentication.

v1 BrowserCompat API

Note: This project has been cancelled, and this information is historical.

The v1 API was designed to store and maintain information about web technologies, such as HTML and CSS, in the manner used on [MDN](#). This takes the form of **Specification** tables, which detail the specifications for technologies, and **Browser Compatibility** tables, which detail when browsers implemented those technologies. A simple example is for the [HTML element <address>](#). A more complex example is the [CSS property display](#).

The v1 API was designed in March 2014, and implemented over the next year. It was allowed to be partially implemented, and labeled as “draft”, so that the design could be modified as new problems were discovered. The API as designed is mostly implemented as of December 2015, but further changes will be made to the v1 API in 2016. See the issues page for details.

The v1 API was based on release candidate 1 (RC1) of the [JSON API](#) specification, which was released 2014-07-05. Starting with RC2 on 2015-02-18, The JSON API team rapidly iterated on the design, making significant changes informed by the experience of implementors. [JSON API v1.0](#) was released May 2015, and is significantly different from RC1. The JSON API team does not preserve documentation for release candidates (online or with a git tag), so it is impossible to refer to the documentation for RC1.

v1 will remain on JSON API RC1. The next version of the API, v2, will support JSON API 1.0. Both the v1 and v2 APIs will be supported until the tools are updated, and then the v1 API will be retired.

Resources

Resources are simple objects supporting [CRUD](#) operations. Read operations can be done anonymously. Creating and updating require account permissions, and deleting requires admin account permissions.

All resources support similar operations using HTTP methods:

- GET /api/v1/<type> - List or search instances (paginated)
- POST /api/v1/<type> - Create a new instance
- GET /api/v1/<type>/<id> - Retrieve an instance
- PUT /api/v1/<type>/<id> - Update an instance
- DELETE /api/v1/<type>/<id> - Delete an instance

Because the operations are similar, only [browsers](#) has complete examples, and others just show retrieving an instance (GET /api/v1/<type>/<id>). Full requests and responses are generated and stored in the [source repository](#)

Contents

- *Resources*
 - *Browsers*
 - * *List*
 - * *Retrieve by ID*
 - * *Retrieve by Slug*
 - * *Create*
 - * *Update*
 - * *Partial Update*
 - * *Update order of related resources*
 - * *Reverting to a previous instance*
 - * *Deletion*
 - * *Reverting a deletion*
 - *Versions*
 - *Features*
 - *Supports*
 - *Specifications*
 - *Sections*
 - *References*
 - *Maturities*

Browsers

A **browser** is a brand of web client that has one or more versions. This follows most users' understanding of browsers, i.e., `firefox_desktop` represents desktop Firefox, `safari_desktop` represents desktop Safari, and `firefox_android` represents Firefox on Android.

The **browsers** representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **slug** (*write-once*) - Unique, human-friendly slug
 - **name** (*localized*) - Browser name
 - **note** (*localized*) - Notes, intended for related data like OS, applicable device, etc.
- **links**
 - **versions** (*many*) - Associated *versions*, ordered roughly from earliest to latest. User can change the order.
 - **history_current** (*one*) - Current historical_browsers. Can be set to a value from **history** to revert changes.

- **history (many)** - Associated historical_browsers in time order (most recent first). Changes are ignored.

Note: bug 1078699 is proposing that select users will be able to modify slugs

List

To request the paginated list of **browsers**:

```
GET /api/v1/browsers HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```

        "type": "historical_browsers",
        "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.
    ↪history_current}"
    },
    "browsers.history": {
        "type": "historical_browsers",
        "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.
    ↪history}"
    }
},
"meta": {
    "pagination": {

```

```
        "browsers": {
            "previous": null,
            "next": "https://browsercompat.org/api/v1/browsers?page=2",
            "count": 15
        }
    }
}
```

Retrieve by ID

Note: bug 1230306 is proposing switching IDs to UUIDs.

To request a single **browser** with a known ID:

```
GET /api/v1/browsers/7 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
    "browsers": {
        "id": "7",
        "slug": "firefox_desktop",
        "name": {
            "en": "Firefox for Desktop"
        },
        "note": null,
        "links": {
            "versions": [
                "17",
                "18",
                "19",
                "20",
                "21"
            ],
            "history_current": "7",
            "history": [
                "7"
            ]
        }

            "href": "https://browsercompat.org/api/v1/versions/{browsers.versions}"
        },
        "browsers.history_current": {
            "type": "historical_browsers",
            "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.
↪history_current}"
        },
    }
}
```

```

    "browsers.history": {
        "type": "historical_browsers",
        "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.
↳history}"
    }
}

```

Retrieve by Slug

Note: bug 1078699 is proposing an alternate URL format.

To request a **browser** by slug:

```
GET /api/v1/browsers?slug=firefox_desktop HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

The response includes the desired browser, in list format:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
    "browsers": [
        {
            "id": "7",
            "slug": "firefox_desktop",
            "name": {
                "en": "Firefox for Desktop"
            },
            "note": null,
            "links": {
                "versions": [
                    "17",
                    "18",
                    "19",
                    "20",
                    "21"
                ],
                "history_current": "7",
                "history": [
                    "7"
                ]
            }
        }
    ],
    "links": {
        "browsers.versions": {
            "type": "versions",
            "href": "https://browsercompat.org/api/v1/versions/{browsers.versions}"
        },
        "browsers.history_current": {
            "type": "historical_browsers",
            "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.
↳history_current}"
        }
    }
}
```

```
        },
        "browsers.history": {
            "type": "historical_browsers",
            "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.
↳history}"
        }
    },
    "meta": {
        "pagination": {
            "browsers": {
                "previous": null,
                "next": null,
                "count": 1
            }
        }
    }
}
```

Create

Creating **browser** instances require authentication with create privileges. To create a new **browser** instance, POST a representation with at least the required parameters. Some items (such as the `id` attribute and the `history_current` link) will be picked by the server, and will be ignored if included.

Here's an example of creating a **browser** instance, with cookie-based authentication:

```
POST /api/v1/browsers HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 132
Content-Type: application/vnd.api+json
```

```
{
    "browsers": {
        "slug": "amazon-silk-mobile",
        "name": {
            "en": "Amazon Silk Mobile"
        }
    }
}
```

A sample response is:

```
HTTP/1.1 201 CREATED
Content-Type: application/vnd.api+json
```

```
{
    "browsers": {
        "id": "16",
        "slug": "amazon-silk-mobile",
        "name": {
            "en": "Amazon Silk Mobile"
        },
        "note": null,
```

```

    "links": {
      "versions": [],
      "history_current": "16",
      "history": [
        "16"
      ]
    }
  },
  "links": {
    "browsers.versions": {
      "type": "versions",
      "href": "https://browsercompat.org/api/v1/versions/{browsers.versions}"
    },
    "browsers.history_current": {
      "type": "historical_browsers",
      "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.
    ↪history_current}"
    },
    "browsers.history": {
      "type": "historical_browsers",
      "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.
    ↪history}"
    }
  }
}

```

This, and other methods that change resources, will create a new changeset, and associate the new historical_browsers with that changeset. To assign to an existing changeset, add it to the URI:

```

POST /api/v1/browsers?use_changeset=4 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 220
Content-Type: application/vnd.api+json

```

```
{
  "browsers": {
    "slug": "nintendo-ds",
    "name": {
      "en": "Nintendo DS Browser",
      "ja": "\u30cb\u30f3\u30c6\u30f3\u30c9\u30fc\uff24\uff33\u30d6\u30e9\u30a6\u30b6"
    }
  }
}
```

A sample response is:

```

HTTP/1.1 201 CREATED
Content-Type: application/vnd.api+json

```

```
{
  "browsers": {
    "id": "18",
    "slug": "nintendo-ds",
    "name": {

```

```
        "en": "Nintendo DS Browser",
        "ja": ""
    },
    "note": null,
    "links": {
        "versions": [],
        "history_current": "18",
        "history": [
            "18"
        ]
    }
},
"links": {
    "browsers.versions": {
        "type": "versions",
        "href": "https://browsercompat.org/api/v1/versions/{browsers.versions}"
    },
    "browsers.history_current": {
        "type": "historical_browsers",
        "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.history_current}"
    },
    "browsers.history": {
        "type": "historical_browsers",
        "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.history}"
    }
}
}
```

Update

Updating a **browser** instance require authentication with create privileges. Some items (such as the `id` attribute and `history` links) can not be changed, and will be ignored if included. A successful update will return a `200 OK`, add a new ID to the `history` links list, and update the `history_current` link.

This update changes the English name from “Internet Explorer” to “Microsoft Internet Explorer”:

```
PUT /api/v1/browsers/9 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 1000
Content-Type: application/vnd.api+json
```

```
{
    "browsers": {
        "id": "9",
        "slug": "ie_desktop",
        "name": {
            "en": "Microsoft Internet Explorer"
        },
        "note": null,
        "links": {
            "history": [
                "9"
            ]
        }
    }
}
```

```

        ],
        "history_current": "9",
        "versions": [
            "25",
            "26",
            "27",
            "28",
            "29"
        ]
    }
},
"links": {
    "browsers.history": {
        "type": "historical_browsers",
        "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.
        ↪history}"
    },
    "browsers.history_current": {
        "type": "historical_browsers",
        "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.
        ↪history_current}"
    },
    "browsers.versions": {
        "type": "versions",
        "href": "https://browsercompat.org/api/v1/versions/{browsers.versions}"
    }
}
}
}

```

With this response:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
    "browsers": {
        "id": "9",
        "slug": "ie_desktop",
        "name": {
            "en": "Microsoft Internet Explorer"
        },
        "note": null,
        "links": {
            "versions": [
                "25",
                "26",
                "27",
                "28",
                "29"
            ],
            "history_current": "19",
            "history": [
                "19",
                "9"
            ]
        }
    },
    "links": {

```

```
"browsers.versions": {
    "type": "versions",
    "href": "https://browsercompat.org/api/v1/versions/{browsers.versions}"
},
"browsers.history_current": {
    "type": "historical_browsers",
    "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.
↪history_current}"
},
"browsers.history": {
    "type": "historical_browsers",
    "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.
↪history}"
}
}
```

Partial Update

An update can just update the target fields. This is a further request to change the English name for the Internet Explorer browser.

```
PUT /api/v1/browsers/9 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 78
Content-Type: application/vnd.api+json
```

```
{
  "browsers": {
    "name": {
      "en": "IE"
    }
  }
}
```

With this response:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
  "browsers": {
    "id": "9",
    "slug": "ie_desktop",
    "name": {
      "en": "IE"
    },
    "note": null,
    "links": {
      "versions": [
        "25",
        "26",
        "27",
        "28"
      ]
    }
  }
}
```

```

        "28",
        "29"
    ],
    "history_current": "20",
    "history": [
        "20",
        "19",
        "9"
    ]
}
},
"links": {
    "browsers.versions": {
        "type": "versions",
        "href": "https://browsercompat.org/api/v1/versions/{browsers.versions}"
    },
    "browsers.history_current": {
        "type": "historical_browsers",
        "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.
↪history_current}"
    },
    "browsers.history": {
        "type": "historical_browsers",
        "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.
↪history}"
    }
}
}
}

```

Update order of related resources

In many cases, related resources (which appear in the “links” attribute”) are sorted by ID. In some cases, the order is significant, and is set on a related field. For example, **versions** for a **browser** are ordered by updating the order on the **browser** object:

To change just the *versions* order:

```
PUT /api/v1/browsers/9 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 205
Content-Type: application/vnd.api+json
```

```
{
    "browsers": {
        "links": {
            "versions": [
                "25",
                "26",
                "27",
                "29",
                "28"
            ]
        }
    }
}
```

```
}
```

With this response:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
  "browsers": {
    "id": "9",
    "slug": "ie_desktop",
    "name": {
      "en": "IE"
    },
    "note": null,
    "links": {
      "versions": [
        "25",
        "26",
        "27",
        "29",
        "28"
      ],
      "history_current": "21",
      "history": [
        "21",
        "20",
        "19",
        "9"
      ]
    }
  },
  "links": {
    "browsers.versions": {
      "type": "versions",
      "href": "https://browsercompat.org/api/v1/versions/{browsers.versions}"
    },
    "browsers.history_current": {
      "type": "historical_browsers",
      "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.
    ↪history_current}"
    },
    "browsers.history": {
      "type": "historical_browsers",
      "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.
    ↪history}"
    }
  }
}
```

Reverting to a previous instance

To revert to an earlier instance, set the history_current link to a previous value. This resets the content and creates a new historical_browsers object:

```
PUT /api/v1/browsers/9 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 91
Content-Type: application/vnd.api+json
```

```
{
  "browsers": {
    "links": {
      "history_current": "9"
    }
  }
}
```

With this response (note that the name and version order have reverted to the *original values*):

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
  "browsers": {
    "id": "9",
    "slug": "ie_desktop",
    "name": {
      "en": "Internet Explorer for Desktop"
    },
    "note": null,
    "links": {
      "versions": [
        "25",
        "26",
        "27",
        "29",
        "28"
      ],
      "history_current": "22",
      "history": [
        "22",
        "21",
        "20",
        "19",
        "9"
      ]
    }
  },
  "links": {
    "browsers.versions": {
      "type": "versions",
      "href": "https://browsercompat.org/api/v1/versions/{browsers.versions}"
    },
    "browsers.history_current": {
      "type": "historical_browsers",
      "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.
      ↪history_current}"
    },
    "browsers.history": {
      "type": "historical_browsers",
      "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.
      ↪history}"
    }
  }
}
```

```
        "type": "historical_browsers",
        "href": "https://browsercompat.org/api/v1/historical_browsers/{browsers.
    ↪history}"
    }
}
```

Deletion

To delete a **browser**:

```
DELETE /api/v1/browsers/16 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 0
```

The response has no body:

```
HTTP/1.1 204 NO CONTENT
```

Reverting a deletion

Reverting deletions is not currently possible, and is tracked in [bug 1159349](#).

Versions

A **version** is a specific release of a Browser.

The **versions** representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **version** (*write-once*) - Version of browser. Numeric or text string, depending on the status (see table below).
 - **release_day** - Day that browser was released in [ISO 8601](#) format, or null if unknown.
 - **retirement_day** - Approximate day the browser was “retired” (stopped being a current browser), in [ISO 8601](#) format, or null if unknown.
 - **status** - One of beta, current, future, retired-beta, retired, or unknown (see table below).
 - **release_notes_uri** (*localized*) - URI of release notes for this version, or null if none.
 - **note** (*localized*) - Engine, OS, etc. information, or null
 - **order** (*read-only*) - The relative order among versions for this browser. The order can be changed on the **browser** resource.
- **links**
 - **browser** - The related **browser**

- **supports (many)** - Associated **supports**, in ID order. Changes are ignored; work on the **supports** to add, change, or remove.
- **history_current (one)** - Current **historical_versions**. Set to a value from **history** to revert to that version.
- **history (many)** - Associated **historical_versions**, in time order (most recent first). Changes are ignored.

The version is either a numeric value, such as "11.0", or text, such as "Nightly". The version format depends on the chosen status:

Status	Version	Meaning
beta	numeric	A release candidate suggested for early adopters or testers
current	numeric or the text "current"	A current and preferred release for most users
future	text such as "Nightly"	A named but unnumbered future release
retired-beta	numeric	An old beta version, replaced by a new beta or release
retired	numeric	An old released version no longer recommended for users
unknown	numeric	A release with an unknown status

To get a single **version**:

```
GET /api/v1/versions/21 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
  "versions": {
    "id": "21",
    "version": "16.0",
    "release_day": "2012-10-09",
    "retirement_day": "2012-11-20",
    "status": "retired",
    "release_notes_uri": {

    },
    "versions.supports": {
        "type": "supports",
        "href": "https://browsercompat.org/api/v1/supports/{versions.supports}"
    },
    "versions.history_current": {
        "type": "historical_versions",
        "href": "https://browsercompat.org/api/v1/historical_versions/{versions.
↳history_current}"
    },
    "versions.history": {
        "type": "historical_versions",
        "href": "https://browsercompat.org/api/v1/historical_versions/{versions.
↳history}"
    }
}
}
```

Features

A **feature** is a web technology. This could be a precise technology, such as the value `cover` for the CSS `background-size` property. It could be a hierarchical group of related technologies, such as the CSS `background-size` property or the set of all CSS properties. Some features correspond to a page on [MDN](#), which will display the list of specifications and a browser compatibility table of the sub-features.

The **features** representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **slug** (*write-once*) - Unique, human-friendly slug
 - **mdn_uri** (*optional, localized*) - The URI of the language-specific MDN page that this feature was first scraped from. If the path contains unicode, it should be percent-encoded as in [RFC 3987](#). May be used in UX or for debugging import scripts.
 - **experimental** - True if a feature is considered experimental, such as being non-standard or part of an non-ratified spec.
 - **standardized** - True if a feature is described in a standards-track spec, regardless of the spec's maturity.
 - **stable** - True if a feature is considered suitable for production websites.
 - **obsolete** - True if a feature should not be used in new development.

- **name** (*canonical or localized*) - Feature name. If the name is the code used by a developer, then the value is a string, and should be wrapped in a `<code>` block when displayed. If the name is a description of the feature, then the value is the available translations, including at least an en translation, and may include HTML markup. For example, "display" and "display: none" are canonical names for the CSS display property and one of the values for that property, while "Basic support", "<code>none, inline</code>" and "<code>block</code>", and "CSS Properties" are non-canonical names that should be translated.

- **links**

- **references** (*many*) - Associated *references*. Order can be changed by the user.
- **supports** (*many*) - Associated *supports*, Order is in ID order, changes are ignored.
- **parent** (*one or null*) - The feature one level up, or null if top-level. Can be changed by user.
- **children** (*many*) - The features that have this feature as parent, in display order. Can be an empty list, for "leaf" features. Can be re-ordered by the user.
- **history_current** (*one*) - Current historical_features. User can set to a valid **history** to revert to that version.
- **history** (*many*) - Associated historical_features, in time order (most recent first). Changes are ignored.

To get a specific **feature** (in this case, a leaf feature with a translated name):

```
GET /api/v1/features/12 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
  "features": {
    "id": "12",
    "slug": "web-css-transform-three-value-syntax",

      "parent": "10",
      "children": [],
      "references": [],
      "supports": [
        "20",
        "21",
        "22",
        "23",
        "24",
        "25",
        "26",
        "27",
        "28",
        "29",
        "30"
      ]
    }
  }
}
```

```
        "26"
    ],
    "history_current": "12",
    "history": [
        "12"
    ]
}
},
"links": {
    "features.parent": {
        "type": "features",
        "href": "https://browsercompat.org/api/v1/features/{features.parent}"
    },
    "features.children": {
        "type": "features",
        "href": "https://browsercompat.org/api/v1/features/{features.children}"
    },
    "features.references": {
        "type": "references",
        "href": "https://browsercompat.org/api/v1/references/{features.references}"
    },

    }
}
}
}

```

Supports

A **support** is an assertion that a particular Version of a Browser supports (or does not support) a feature.

The **support** representation includes:

- **attributes**

- **id** (*server selected*) - Database ID
- **support** - Assertion of support of the *version* for the *feature*, one of "yes", "no", "partial", or "unknown"
- **prefix** - Prefix used to enable support, such as "moz"
- **prefix_mandatory** - True if the prefix is required
- **alternate_name** - An alternate name associated with this feature, such as "RTCPeerConnectionIdentityEvent"
- **alternate_name_mandatory** - True if the alternate name is required
- **requires_config** - A configuration string required to enable the feature, such as "media.peerconnection.enabled=on"
- **default_config** - The configuration string in the shipping browser, such as "media.peerconnection.enabled=off"
- **protected** - True if the feature requires additional steps to enable in order to protect the user's security or privacy, such as geolocation and the Bluetooth API.
- **note** (*localized*) - Note on support, designed for display after a compatibility table, can contain HTML

- **links**

- **version (one)** - The associated *version*. Cannot be changed by the user after creation.
- **feature (one)** - The associated *feature*. Cannot be changed by the user after creation. The version and feature combo must be unique.
- **history_current (one)** - Current historical_supports. Can be changed to a valid **history** to revert to that version.
- **history (many)** - Associated historical_supports in time order (most recent first). Changes are ignored.

To get a single **support**:

```
GET /api/v1/supports/22 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
  "supports": {
    "id": "22",
    "support": "yes",
    "prefix": null,
    "prefix_mandatory": false,
    "alternate_name": null,
    "alternate_mandatory": false,
    "requires_config": null,
    "default_config": null,
    "protected": false,
    "note": null,
```

```

"links": {
    "version": "21",
    "feature": "12",
    "history_current": "22",
    "history": [
        "22"
    ]
},
"links": {
    "supports.version": {
        "type": "versions",
        "href": "https://browsercompat.org/api/v1/versions/{supports.version}"
    },
    "supports.feature": {
        "type": "features",
        "href": "https://browsercompat.org/api/v1/features/{supports.feature}"
    },
    "supports.history_current": {
        "type": "historical_supports",
        "href": "https://browsercompat.org/api/v1/historical_supports/{supports.
    ↪history_current}"
    },
    "supports.history": {
        "type": "historical_supports",
        "href": "https://browsercompat.org/api/v1/historical_supports/{supports.
    ↪history}"
    }
}
}

```

Specifications

A **specification** is a standards document that specifies a web technology.

The **specification** representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **slug** - Unique, human-friendly key
 - **mdn_key** - Key used in the KumaScript macros `SpecName` and `Spec2`.
 - **name** (*localized*) - Specification name
 - **uri** (*localized*) - Specification URI, without subpath and anchor
- **links**
 - **maturity** (*one*) - Associated *maturity*. Can be changed by the user.
 - **sections** (*many*) - Associated *sections*. The order can be changed by the user.
 - **history_current** (*one*) - Current historical_specifications. Can be changed to a valid **history** to revert to that version.
 - **history** (*many*) - Associated historical_specifications in time order (most recent first). Changes are ignored.

To get a single specification:

```
GET /api/v1/specifications/2 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
  "specifications": {
    "id": "2",
    "slug": "css2_1",
    "mdn_key": "CSS2.1",
    "name": {
      "en": "CSS Level 2 (Revision 1)"
    },
    "uri": {
      "en": "http://www.w3.org/TR/CSS2/"
    },
    "links": {
      "maturity": "1",
      "sections": [
        "2"
      ],
      "history_current": "2",
      "history": [
        "2"
      ]
    }
  },
  "links": {
    "specifications.maturity": {
      "type": "maturities",
      "href": "https://browsercompat.org/api/v1/maturities/{specifications.
    ↪maturity}"
    },
    "specifications.sections": {
      "type": "sections",
      "href": "https://browsercompat.org/api/v1/sections/{specifications.
    ↪sections}"
    },
    "specifications.history_current": {
      "type": "historical_specifications",
      "href": "https://browsercompat.org/api/v1/historical_specifications/
    ↪{specifications.history_current}"
    },
    "specifications.history": {
      "type": "historical_specifications",
      "href": "https://browsercompat.org/api/v1/historical_specifications/
    ↪{specifications.history}"
    }
  }
}
```

Sections

A **section** refers to a specific area of a *specification* document.

The **section** representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **number** (*optional, localized*) - The section number
 - **name** (*localized*) - Section name
 - **subpath** (*localized, optional*) - A subpage (possibly with an #anchor) to get to the subsection in the doc. Can be empty string.
- **links**
 - **specification** (*one*) - The *specification*. Can be changed by the user.
 - **references** (*many*) - The associated references. In ID order, changes are ignored.
 - **history_current** (*one*) - Current historical_sections. Can be changed to a valid **history** to revert to that version.
 - **history** (*many*) - Associated historical_sections in time order (most recent first). Changes are ignored.

To get a single **section**:

```
GET /api/v1/sections/3 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
  "sections": {
    "id": "3",
    "number": {
      "en": "16"
    },
    "name": {
      "en": "The float property"
    },
    "subpath": {
      "en": "#the-float-property"
    },
    "links": {
      "references": [
        "3"
      ],
      "specification": "3",
      "history_current": "3",
      "history": [
        "3"
      ]
    }
  }
},
```

```
"links": {
    "sections.references": {
        "type": "references",
        "href": "https://browsercompat.org/api/v1/references/{sections.references}"
    },
    "sections.specification": {
        "type": "specifications",
        "href": "https://browsercompat.org/api/v1/specifications/{sections.specification}"
    },
    "sections.history_current": {
        "type": "historical_sections",
        "href": "https://browsercompat.org/api/v1/historical_sections/{sections.history_current}"
    },
    "sections.history": {
        "type": "historical_sections",
        "href": "https://browsercompat.org/api/v1/historical_sections/{sections.history}"
    }
}
```

References

A **reference** ties a specification *section* to a *feature*.

The **reference** representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **note** (*localized, optional*) - Notes for this reference
- **links**
 - **feature** (*one*) - The feature. Can be changed by the user.
 - **section** (*one*) - The section. Can be changed by the user.
 - **history_current** (*one*) - Current historical_references. Can be changed to a valid **history** to revert to that version.
 - **history** (*many*) - Associated historical_references in time order (most recent first). Changes are ignored.

To get a single **reference**:

```
GET /api/v1/references/3 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
    "references": {
        "id": "3",
        "note": {
            "en": "Lots of new values, not all clearly defined yet. Any differences in behavior unrelated to new features are expected to be unintentional; please report."
        },
        "links": {
            "feature": "5",
            "section": "3",
            "history_current": "3",
            "history": [
                "3"
            ]
        }
    },
    "links": {
        "references.feature": {
            "type": "features",
            "href": "https://browsercompat.org/api/v1/features/{references.feature}"
        },
        "references.section": {
            "type": "sections",
            "href": "https://browsercompat.org/api/v1/sections/{references.section}"
        },
        "references.history_current": {
            "type": "historical_references",
            "href": "https://browsercompat.org/api/v1/historical_references/{references.history_current}"
        },
        "references.history": {
            "type": "historical_references",
            "href": "https://browsercompat.org/api/v1/historical_references/{references.history}"
        }
    }
}
```

Maturities

A **maturity** refers to the maturity of a *specification* document.

The **maturity** representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **slug** - A human-friendly identifier for this maturity. When applicable, it matches the key in the KumaScript macro `Spec2`
 - **name** (*localized*) - Status name
- **links**
 - **specifications** (*many*) - Associated *specifications*. In ID order, changes are ignored.

- **history_current** (*one*) - Current historical_maturities. Can be changed to a valid **history** to revert to that version.
- **history** (*many*) - Associated historical_maturities in time order (most recent first). Changes are ignored.

To get a single **maturity**:

```
GET /api/v1/maturities/1 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
  "maturities": {
    "id": "1",
    "slug": "REC",
    "name": {
      "en": "Recommendation",
      "de": "Empfehlung",
      "ja": "",
      "ru": ""
    },
    "links": {
      "specifications": [
        "1",
        "2"
      ],
      "history_current": "1",
      "history": [
        "1"
      ]
    }
  },
  "links": {
    "maturities.specifications": {
      "type": "specifications",
      "href": "https://browsercompat.org/api/v1/specifications/{maturities.
      ↪specifications}"
    },
    "maturities.history_current": {
      "type": "historical_maturities",
      "href": "https://browsercompat.org/api/v1/historical_maturities/
      ↪{maturities.history_current}"
    },
    "maturities.history": {
      "type": "historical_maturities",
      "href": "https://browsercompat.org/api/v1/historical_maturities/
      ↪{maturities.history}"
    }
  }
}
```

Change Control Resources

Change Control Resources help manage changes to resources.

Users

A **user** represents a person or process that creates, changes, or deletes a resource.

The representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **username** - The user's email or ID
 - **created** (*server selected*) - Time that the account was created, in ISO 8601 format.
 - **agreement** - The version of the contribution agreement the user has accepted. “0” for not agreed, “1” for first version, etc.
 - **permissions** - A list of permissions. Permissions include "change-resource" (add or change any resource except *users* or history resources), "delete-resource" (delete any resource) "import-mdn" (setup import of an MDN page)
- **links**
 - **changesets** (*many*) - Associated *changesets*, in ID order, changes are ignored.

To get a single **user** representation:

```
GET /api/v1/users/1 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
  "users": {
    "id": "1",
    "username": "user",
    "created": "2015-04-20T18:06:48.567514Z",
    "agreement": 0,
    "permissions": [
      "change-resource",
      "delete-resource"
    ],
    "links": {
      "changesets": [
        "1"
      ]
    }
  },
  "links": {
    "users.changesets": {
      "type": "changesets",
      "href": "https://browsercompat.org/api/v1/changesets/{users.changesets}"
    }
  }
}
```

```
        }
    }
}
```

You can also request the authenticated user's resource:

```
GET /api/v1/users/me HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
```

The response is a redirect to the user's resource:

```
HTTP/1.1 302 FOUND
Content-Type: text/html; charset=utf-8
Location: https://browsercompat.org/api/v1/users/1
```

If the request is made anonymously, then the response is an error:

```
HTTP/1.1 401 UNAUTHORIZED
Content-Type: application/vnd.api+json
WWW-Authenticate: Bearer realm="api"
```

```
{
  "errors": [
    {
      "detail": "Authentication credentials were not provided.",
      "status": "401"
    }
  ]
}
```

Changesets

A **changeset** collects history resources into a logical unit, allowing for faster reversions and better history display. The **changeset** can be auto-created through a POST, PUT, or DELETE to a resource, or it can be created independently and specified by adding changeset=<ID> URI parameter (i.e., PUT /browsers/15?changeset=73).

The representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **created** (*server selected*) - When the changeset was created, in ISO 8601 format.
 - **modified** (*server selected*) - When the changeset was last modified, in ISO 8601 format.
 - **target_resource_type** (*write-once, optional*) - The name of the primary resource for this changeset, for example “browsers”, “versions”, etc.
 - **target_resource_id** (*write-once, optional*) - The ID of the primary resource for this changeset.
 - **closed** - True if the changeset is closed to new changes. Auto-created changesets are auto-closed, and cache invalidation is delayed until manually created changesets are closed.
- **links**
 - **user** (*one*) - The user who initiated this changeset, can not be changed.

- **historical_browsers** (*many*) - Associated historical_browsers, in ID order, changes are ignored.
- **historical_features** (*many*) - Associated historical_features, in ID order, changes are ignored.
- **historical_maturities** (*many*) - Associated historical_maturities, in ID order, changes are ignored.
- **historical_sections** (*many*) - Associated historical_sections, in ID order, changes are ignored.
- **historical_specificationss** (*many*) - Associated historical_specificationss, in ID order, changes are ignored.
- **historical_supports** (*many*) - Associated historical_supports, in ID order, changes are ignored.
- **historical_versions** (*many*) - Associated historical_versions, in ID order, changes are ignored.

To get a single **changeset** representation:

```
GET /api/v1/changesets/2 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

    }
}
```

History Resources

History Resources are created when a Resource is created, updated, or deleted. By navigating the history chain, a caller can see the changes of a resource over time.

All history representations are similar, so one example should be enough to determine the pattern.

Historical Browsers

A **historical_browser** resource represents the state of a browser at a point in time, and who is responsible for that state. The representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **date** (*server selected*) - The time of this change in ISO 8601
 - **event** (*server selected*) - The type of event, one of "created", "changed", or "deleted"
 - **browsers** - The **browsers** representation at this point in time
- **links**

- **browser** (*one*) - Associated browser, can not be changed
- **changeset** (*one*) - Associated changeset, can not be changed.

To get a single **historical_browsers** representation:

```
GET /api/v1/historical_browsers/7 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
  "historical_browsers": {
    "id": "7",
    "date": "2015-04-20T18:44:09.905824Z",
    "event": "created",
    "browsers": {
      "id": "7",
      "slug": "firefox_desktop",
      "name": {
        "en": "Firefox for Desktop"
      },
      "note": null,
      "links": {
        "versions": [],
        "history_current": "7"
      }
    },
    "links": {
      "changeset": "1",
      "browser": "7"
    }
  },
  "links": {
    "historical_browsers.changeset": {
      "type": "changesets",
      "href": "https://browsercompat.org/api/v1/changesets/{historical_browsers.
    ↪changeset}"
    },
    "historical_browsers.browser": {
      "type": "browsers",
      "href": "https://browsercompat.org/api/v1/browsers/{historical_browsers.
    ↪browser}"
    }
  }
}
```

Historical Versions

A **historical_versions** resource represents the state of a version at a point in time, and who is responsible for that representation. See [historical_browsers](#) and [versions](#) for an idea of the representation.

Historical Features

A **historical_features** resource represents the state of a feature at a point in time, and who is responsible for that representation. See [historical_browsers](#) and features for an idea of the representation.

Historical Sections

A **historical_sections** resource represents the state of a section at a point in time, and who is responsible for that representation. See [historical_browsers](#) and sections for an idea of the representation.

Historical Specifications

A **historical_specifications** resource represents the state of a specification at a point in time, and who is responsible for that representation. See [historical_browsers](#) and specifications for an idea of the representation.

Historical Supports

A **historical_supports** resource represents the state of a support at a point in time, and who is responsible for that representation. See [historical_browsers](#) and supports for an idea of the representation.

Historical References

A **historical_references** resource represents the state of a reference at a point in time, and who is responsible for that representation. See [historical_browsers](#) and references for an idea of the representation.

Historical Maturities

A **historical_maturities** resource represents the state of a maturity at a point in time, and who is responsible for that representation. See [historical_browsers](#) and maturities for an idea of the representation.

Views

A **View** is a combination of resources for a particular presentation. It is suitable for anonymous viewing of content. It uses the flexibility of the JSON API specification to include a basket of related resources in a response, but doesn't use the official method of [Inclusion of Related Resources](#).

View a Feature

This view collects the data for a feature, including the related resources needed to display it on MDN.

Here is a simple example, the view for the CSS property `float`:

```
GET /api/v1/view_features/5 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{

```

One way to use this representation is:

1. Parse into an in-memory object store,
2. **Create the “Specifications” section:**
 - (a) Add the Specifications header
 - (b) Create an HTML table with a header row “Specification”, “Status”, “Comment”
 - (c) **For each id in features.links.sections (["746", "421", "70"]):**

- Add the first column: a link to specifications.uri.(lang or en) + sections.subpath.(lang or en), with link text specifications.name.(lang or en), with title based on sections.name.(lang or en) or feature.name.(lang or en).
 - Add the second column: A span with class “spec-” + maturities.slug, and the text maturities.name.(lang or en).
 - Add the third column: maturities.notes.(lang or en), or empty string
- (d) Close the table, and add an edit button.
- 3. Create the Browser Compatibility section:**
- Add The “Browser compatibility” header
 - For each item in meta.compat_table.tabs, create a table with the proper name (“Desktop”, “Mobile”)
 - For each browser id in meta.compat-table.tabs.browsers, add a column with the translated browser name.
 - For each feature in features.features:**
 - Add the first column: the feature name. If it is a string, then wrap in <code>. Otherwise, use the best translation of feature.name, in a lang=(lang) block.
 - Add any feature flags, such as an obsolete or experimental icon, based on the feature flags.
 - For each browser id in meta.compat-table-important:**
 - Get the important support IDs from meta.compat-table-important.supports.<feature ID>.<browser ID>
 - If null, then display “?”
 - If just one, display “<version>”, or “<support>”, depending on the defined attributes
 - If multiple, display as subcells
 - Add prefixes, alternate names, config, and notes link as appropriate
 - Close each table, add an edit button
 - Add notes for displayed supports

This may be done by including the JSON in the page as sent over the wire, or loaded asynchronously, with the tables built after initial page load.

This can also be used by a “caniuse” table layout by ignoring the meta section and displaying all the included data. This will require more client-side processing to generate, or additional data in the <meta> section.

Including Child Pages

By default, view_feature only includes *row children*, which are subfeatures that are represented as rows in the MDN table. These row children are identified by not having a value for mdn_uri.

There can also be *page children*, which are represented as more detailed page on MDN. For example, Web/CSS has the page child *Web/CSS/Display*. By default, these are not included, but can be included by setting the query parameter child_pages=1:

```
GET /api/v1/view_features/5?child_pages=1 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

Updating Views with Changesets

Updating the page requires a sequence of requests. For example, if a user wants to change Chrome support for <address> from an unknown version to version 1, you'll have to create the version for that version, then add the support for the support.

The first step is to create a changeset as an authenticated user:

```
POST /api/v1/changesets HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 107
Content-Type: application/vnd.api+json
```

```
{
  "changesets": {
    "target_resource_type": "features",
    "target_resource_id": "5"
  }
}
```

A sample response is:

```
HTTP/1.1 201 CREATED
Content-Type: application/vnd.api+json
```

```
{
  "changesets": {
    "id": "36",
    "created": "2015-04-20T20:36:06.794827Z",
    "modified": "2015-04-20T20:36:06.795315Z",
    "closed": false,
    "target_resource_type": "features",
    "target_resource_id": 5,
    "links": {
      "user": "1",
      "historical_browsers": [],
      "historical_features": [],
      "historical_maturities": [],
      "historical_references": [],
      "historical_sections": [],
      "historical_specifications": [],
      "historical_supports": [],
      "historical_versions": []
    }
  },
  "links": {
    "changesets.user": {
      "type": "users",
      "href": "https://browsercompat.org/api/v1/users/{changesets.user}"
    },
    "changesets.historical_browsers": {
      "type": "historical_browsers",
      "href": "https://browsercompat.org/api/v1/historical_browsers/{changesets.
      ↪historical_browsers}"
    },
    "changesets.historical_features": {
```

```

        "type": "historical_features",
        "href": "https://browsercompat.org/api/v1/historical_features/{changesets.
↪historical_features}"
    },
    "changesets.historical_maturities": {
        "type": "historical_maturities",
        "href": "https://browsercompat.org/api/v1/historical_maturities/
↪{changesets.historical_maturities}"
    },
    "changesets.historical_references": {
        "type": "historical_references",
        "href": "https://browsercompat.org/api/v1/historical_references/
↪{changesets.historical_references}"
    },
    "changesets.historical_sections": {
        "type": "historical_sections",
        "href": "https://browsercompat.org/api/v1/historical_sections/{changesets.
↪historical_sections}"
    },
    "changesets.historical_specifications": {
        "type": "historical_specifications",
        "href": "https://browsercompat.org/api/v1/historical_specifications/
↪{changesets.historical_specifications}"
    },
    "changesets.historical_supports": {
        "type": "historical_supports",
        "href": "https://browsercompat.org/api/v1/historical_supports/{changesets.
↪historical_supports}"
    },
    "changesets.historical_versions": {
        "type": "historical_versions",
        "href": "https://browsercompat.org/api/v1/historical_versions/{changesets.
↪historical_versions}"
    }
}
}

```

Next, use the changeset ID when creating the version:

```

POST /api/v1/versions?use_changeset=36 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 138
Content-Type: application/vnd.api+json

```

```
{
    "versions": {
        "version": "2.0",
        "status": "retired",
        "links": {
            "browser": "3"
        }
    }
}
```

A sample response is:

```
HTTP/1.1 201 CREATED
Content-Type: application/vnd.api+json
```

```
{
  "versions": {
    "id": "50",
    "version": "2.0",
    "release_day": null,
    "retirement_day": null,
    "status": "retired",
    "release_notes_uri": null,
    "note": null,
    "order": 3,
    "links": {
      "browser": "3",
      "supports": [],
      "history_current": "53",
      "history": [
        "53"
      ]
    }
  },
  "links": {
    "versions.browser": {
      "type": "browsers",
      "href": "https://browsercompat.org/api/v1/browsers/{versions.browser}"
    },
    "versions.supports": {
      "type": "supports",
      "href": "https://browsercompat.org/api/v1/supports/{versions.supports}"
    },
    "versions.history_current": {
      "type": "historical_versions",
      "href": "https://browsercompat.org/api/v1/historical_versions/{versions.
    ↪history_current}"
    },
    "versions.history": {
      "type": "historical_versions",
      "href": "https://browsercompat.org/api/v1/historical_versions/{versions.
    ↪history}"
    }
  }
}
```

Finally, create the support:

```
POST /api/v1/supports?use_changeset=36 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 112
Content-Type: application/vnd.api+json
```

```
{
  "supports": {
    "links": {
      "version": "50",
```

```

        "feature": "6"
    }
}
}
```

A sample response is:

```
HTTP/1.1 201 CREATED
Content-Type: application/vnd.api+json
```

```
{
  "supports": {
    "id": "29",
    "support": "yes",
    "prefix": null,
    "prefix_mandatory": false,
    "alternate_name": null,
    "alternate_mandatory": false,
    "requires_config": null,
    "default_config": null,
    "protected": false,
    "note": null,
    "links": {
      "version": "50",
      "feature": "6",
      "history_current": "32",
      "history": [
        "32"
      ]
    }
  },
  "links": {
    "supports.version": {
      "type": "versions",
      "href": "https://browsercompat.org/api/v1/versions/{supports.version}"
    },
    "supports.feature": {
      "type": "features",
      "href": "https://browsercompat.org/api/v1/features/{supports.feature}"
    },
    "supports.history_current": {
      "type": "historical_supports",
      "href": "https://browsercompat.org/api/v1/historical_supports/{supports.
    ↪history_current}"
    },
    "supports.history": {
      "type": "historical_supports",
      "href": "https://browsercompat.org/api/v1/historical_supports/{supports.
    ↪history}"
    }
  }
}
```

The historical_versions and historical_supports resources will both refer to changeset 36, and this changeset is linked to feature 5, despite the fact that no changes were made to the feature. This will facilitate displaying a history of the compatibility tables, for the purpose of reviewing changes and reverting vandalism.

Updating View with PUT

`view_features` supports PUT for bulk updates of support data. Here is a simple example that adds a new subfeature without support:

```
PUT /api/v1/view_features/html-element-address HTTP/1.1
Host: browsercompat.org
Content-Type: application/vnd.api+json
Authorization: Bearer mF_9.B5f-4.1JqM
```

```
{
  "features": {
    "id": "816",
    "slug": "html-element-address",
    "mdn_uri": {
      "en": "https://developer.mozilla.org/en-US/docs/Web/HTML/Element/address"
    },
    "experimental": false,
    "standardized": true,
    "stable": true,
    "obsolete": false,
    "name": "address",
    "links": {
      "sections": ["746", "421", "70"],
      "supports": [],
      "parent": "800",
      "children": ["191"],
      "history_current": "216",
      "history": ["216"]
    }
  },
  "linked": {
    "features": [
      {
        "id": "_New Subfeature",
        "slug": "html-address-new-subfeature",
        "name": {
          "en": "New Subfeature"
        },
        "links": {
          "parent": "816"
        }
      }
    ]
  }
}
```

The response is the feature view with new and updated items, or an error response.

This is a trivial use case, which would be better implemented by creating the feature directly, but it can be extended to bulk updates of existing feature views, or for first-time importing of subfeatures and support data. It has some quirks:

- New items should be identified with an ID starting with an underscore (_). Relations to new items should use the underscored IDs.
- Only feature, support, and section resources can be added or updated. Features must be the target feature or a descendant, and supports and sections are restricted to those features.
- Deletions are not supported.

- Other resources (browsers, versions, etc) can not be added or changed. This includes adding links to new resources.

Once the MDN import is complete, this PUT interface will be deprecated in favor of direct POST and PUT to the standard resource API.

v2 BrowserCompat API

Note: This project has been cancelled, and this information is historical.

The v2 BrowserCompat API is designed to store and maintain information about web technologies, such as HTML and CSS, in the manner used on [MDN](#). This takes the form of **Specification** tables, which detail the specifications for technologies, and **Browser Compatibility** tables, which detail when browsers implemented those technologies. A simple example is for the [HTML element <address>](#). A more complex example is the [CSS property display](#).

The v2 API was initially released in January 2016, and is based on [JSON API v1.0](#). The v2 API does not implement the entire JSON API v1.0 specification. See the issues page for the list of known differences between the v2 API and JSON API v1.0.

The v2 API is the recommended API for new code. The v1 API will be retained until MDN tools are updated to work with the v2 API API, and then the v1 API will be removed.

Implementation

The v2 API implements the [JSON API v1.0](#) specification. This section shows how to interact with the API, and the next section gives the details of the resources available through the API.

Resources

Resources are identified by a plural noun. The list of resources, available at <https://browsercompat.herokuapp.com/api/v2>, include:

- **browsers** - A brand of web client with one or more versions
- **versions** - A specific release of a browser
- **features** - A web technology
- **supports** - Support details of a version for a feature
- **specifications** - A document specifying a web technology
- **maturities** - The state of a specification in the standardization process
- **sections** - A section of a specification
- **references** - The link from a section to a feature
- **changesets** - A collection of one or more data changes
- **users** - API users
- **historical_browsers** - A change to a browser resource
- **historical_versions** - A change to a version resource
- **historical_features** - A change to a feature resource

- **historical_supports** - A change to a support resource
- **historical_specifications** - A change to a specification resource
- **historical_maturities** - A change to a maturity resource
- **historical_sections** - A change to a section resource

There is also a view that combines related resources:

- **view_features** - A feature combined with related resources.

List

To request a paginated list of a resource, GET the resource by name:

```
GET /api/v2/browsers HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```

Retrieve by ID

To request a single resource, GET by name and ID.

Note: bug 1230306 proposes switching IDs to UUIDs.

Here's an example:

```
GET /api/v2/browsers/7 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```

        }
    ]
}
}
```

Filter by attribute

Note: bug 1078699 proposes an alternate URL format for retrieving by slug.

Resources can be filtered by an attribute value, using a filter query string:

```
GET /api/v2/browsers?filter[slug]=firefox_desktop HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

The response includes the desired browser, in list format:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
    "links": {
        "self": "https://browsercompat.org/api/v2/browsers?filter[slug]=firefox_
↪desktop",
        "next": null,
        "prev": null
    },
    "data": [
        {
            "type": "browsers",
            "id": "7",
            "attributes": {
                "slug": "firefox_desktop",
                "name": {
                    "en": "Firefox for Desktop"
                },
                "note": null
            },
            "relationships": {
                "versions": {
                    "data": [
                        {
                            "type": "versions",
                            "id": "17"
                        }
                    ]
                }
            }
        }
    ]
}
```

```

        "type": "versions",
        "id": "18"
    },
    {
        "type": "versions",
        "id": "19"
    },
    {
        "type": "versions",
        "id": "20"
    },

```

Fetch Related Resources

Related resources appear in the JSON under /data/relationships. The “related” link can be used to get the related resources:

```

GET /api/v2/browsers/7/versions HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json

```

The response includes the related data, as a list of resources or a single resource, depending on the relationship:

```

HTTP/1.1 200 OK
Content-Type: application/vnd.api+json

```

```
{  
    "links": {  
        "self": "https://browsercompat.org/api/v2/browsers/7/versions",

Fetch Relationships

Alternatively, just the data for a relationship can be retrieved using the “self” link of related resources:

```
GET /api/v2/browsers/7/relationships/versions HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

The response just includes the types and IDs of the related resources:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
  "links": {
    "self": "https://browsercompat.org/api/v2/browsers/7/relationships/versions",
    "related": "https://browsercompat.org/api/v2/browsers/7/versions"
  },
  "data": [
    {
      "type": "versions",
      "id": "17"
    },
    {
      "type": "versions",
      "id": "18"
    },
    {
      "type": "versions",
      "id": "19"
    },
    {
      "type": "versions",
      "id": "20"
    },
    {
      "type": "versions",
      "id": "21"
    }
  ]
}
```

Create a Single Resource

To create a new resource, POST to the resource list as an authenticated user. The POST body must include at least the required attributes. Some items (such as the `history_current` ID) will be picked by the server, and will be ignored if included.

Here is an example creating a browser with minimal data:

```
POST /api/v2/browsers HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 206
Content-Type: application/vnd.api+json
```

```
{  
    "data": {  
        "type": "browsers",  
        "attributes": {  
            "slug": "amazon-silk-mobile",  
            "name": {  
                "en": "Amazon Silk Mobile"  
            }  
        }  
    }  
}
```

A sample response is:

```
HTTP/1.1 201 CREATED  
Content-Type: application/vnd.api+json
```

```
{  
    "links": {  
        "self": "https://browsercompat.org/api/v2/browsers"  
    },  
    "data": {  
        "type": "browsers",  
        "id": "16",  
        "attributes": {  
            "slug": "amazon-silk-mobile",  
            "name": {  
                "en": "Amazon Silk Mobile"  
            },  
            "note": null  
        },  
        "relationships": {  
            "versions": {  
                "links": {  
                    "self": "https://browsercompat.org/api/v2/browsers/relationships/  
↳ versions",  
                    "related": "https://browsercompat.org/api/v2/browsers/versions"  
                },  
                "data": []  
            },  
            "history_current": {  
                "links": {  
                    "self": "https://browsercompat.org/api/v2/browsers/relationships/  
↳ history_current",  
                    "related": "https://browsercompat.org/api/v2/browsers/history_  
↳ current"  
                },  
                "data": {  
                    "type": "historical_browsers",  
                    "id": "16"  
                }  
            },  
            "history": {  
                "links": {  
                    "self": "https://browsercompat.org/api/v2/browsers/relationships/  
↳ history",  
                    "related": "https://browsercompat.org/api/v2/browsers/history"  
                },  
                "data": []  
            }  
        }  
    }  
}
```

```

        "data": [
            {
                "type": "historical_browsers",
                "id": "16"
            }
        ]
    }
}

```

Create Multiple Resources

When creating several resources, the changes can be associated by first creating a changeset:

```

POST /api/v2/changesets HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 115
Content-Type: application/vnd.api+json

```

```

{
    "data": {
        "type": "changesets",
        "attributes": {
            "closed": false
        }
    }
}

```

A sample response is:

```

HTTP/1.1 201 CREATED
Content-Type: application/vnd.api+json

```

```

{
    "links": {
        "self": "https://browsercompat.org/api/v2/changesets"
    },
    "data": {
        "type": "changesets",
        "id": "4",
        "attributes": {
            "created": "2016-01-08T22:22:22.292921Z",
            "modified": "2016-01-08T22:22:33.916387Z",
            "closed": false,
            "target_resource_type": null,
            "target_resource_id": null
        },
        "relationships": {
            "user": {
                "links": {
                    "self": "https://browsercompat.org/api/v2/changesets/
↪relationships/user",
                    "related": "https://browsercompat.org/api/v2/changesets/user"
                }
            }
        }
    }
}

```

```
        },
        "data": {
            "type": "users",
            "id": "1"
        }
    },
    "historical_browsers": {

            "related": "https://browsercompat.org/api/v2/changesets/
↪historical_maturities"
        },
        "data": []
    },
    "historical_references": {
        "links": {
            "self": "https://browsercompat.org/api/v2/changesets/
↪relationships/historical_references",
            "related": "https://browsercompat.org/api/v2/changesets/
↪historical_references"
        },
        "data": []
    },
    "historical_sections": {
        "links": {
            "self": "https://browsercompat.org/api/v2/changesets/
↪relationships/historical_sections",
            "related": "https://browsercompat.org/api/v2/changesets/
↪historical_sections"
        },
        "data": []
    },
    "historical_specifications": {
        "links": {
            "self": "https://browsercompat.org/api/v2/changesets/
↪relationships/historical_specifications",
            "related": "https://browsercompat.org/api/v2/changesets/
↪historical_specifications"
        },
        "data": []
    }
},
```

```
        "data": []
    },
    "historical_supports": {
        "links": {
            "self": "https://browsercompat.org/api/v2/changesets/
relationships/historical_supports",
            "related": "https://browsercompat.org/api/v2/changesets/
historical_supports"
        },
        "data": []
    },
    "historical_versions": {
        "links": {
            "self": "https://browsercompat.org/api/v2/changesets/
relationships/historical_versions",
            "related": "https://browsercompat.org/api/v2/changesets/
historical_versions"
        },
        "data": []
    }
}
```

The changeset can then be specified as a query parameter:

```
POST /api/v2/browsers?use_changeset=4 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 298
Content-Type: application/vnd.api+json
```

```
{
  "data": {
    "type": "browsers",
    "attributes": {
      "slug": "nintendo-ds",
      "name": {
        "en": "Nintendo DS Browser",
        "ja": "任天堂DS ブラウザ"
      }
    }
  }
}
```

A sample response is:

HTTP/1.1 201 CREATED
Content-Type: application/vnd.api+json

```
{  
  "links": {  
    "self": "https://browsercompat.org/api/v2/browsers?use_changeset=4"  
  },  
  "data": {
```

```
"type": "browsers",
"id": "18",
"attributes": {
  "slug": "nintendo-ds",

→versions",
      "related": "https://browsercompat.org/api/v2/browsers/versions"
    },
    "data": []
  },
  "history_current": {
    "links": {
      "self": "https://browsercompat.org/api/v2/browsers/relationships/
→history_current",
      "related": "https://browsercompat.org/api/v2/browsers/history_
→current"
    },
    "data": {
      "type": "historical_browsers",
      "id": "18"
    }
  },
  "history": {
    "links": {
      "self": "https://browsercompat.org/api/v2/browsers/relationships/
→history",
      "related": "https://browsercompat.org/api/v2/browsers/history"
    },
    "data": [
      {
        "type": "historical_browsers",
        "id": "18"
      }
    ]
  }
}
}
```

Finally, close the changeset, which is now associated with the historical resources:

```
PATCH /api/v2/changesets/4 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 114
Content-Type: application/vnd.api+json
```

```
{
  "data": {
    "type": "changesets",
    "attributes": {
      "closed": true
    }
  }
}
```

The response includes relationships to the items created in the changeset:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
  "links": {
    "self": "https://browsercompat.org/api/v2/changesets/4"
  },

    }
}
```

Update a resource

To update a resource with new data, PATCH the instance with the new data. Omitted items will keep their old values. For each resource, there are some items that can not be changed (for example, the `id` or the `history` relationship IDs), and will be ignored if included in the update request. A successful update will return a `200 OK`, add a new ID to the `history` relationship, and update the `history_current` relationship.

Here's an example of updating a browser:

```
PATCH /api/v2/browsers/9 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 167
Content-Type: application/vnd.api+json
```

```
{
  "data": {
    "type": "browsers",
    "id": "9",
    "attributes": {
      "name": {
        "en": "IE"
      }
    }
  }
}
```

With this response:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
  "links": {
    "self": "https://browsercompat.org/api/v2/browsers/9"
  },
  "data": {
    "type": "browsers",
    "id": "9",
    "attributes": {
      "slug": "ie_desktop",
      "name": {
        "en": "IE"
      },
      "note": null
    },
    "relationships": {
      "versions": {
        "links": {
          "self": "https://browsercompat.org/api/v2/browsers/9/
→relationships/versions",
        }
      }
    }
  }
}
```

```
        "related": "https://browsercompat.org/api/v2/browsers/9/versions"
    },
    "data": [
        {
            "type": "versions",
            "id": "25"
        },
        {
            "type": "versions",
            "id": "26"
        },
        {
            "type": "versions",
            "id": "27"
        },
        {
            "type": "versions",
            "id": "28"
        },
        {
            "type": "versions",
            "id": "29"
        }
    ]
},
"history_current": {
    "links": {

        {
            "type": "historical_browsers",
            "id": "19"
        },
        {
            "type": "historical_browsers",
            "id": "9"
        }
    ]
}
```

```

        }
    }
}
```

Update a one-to-many relationship

Some relationships are one-to-many, and the relationship appears on both sides. For example, a specification has one maturity, but a maturity can be related to several specifications. To update these relationships, PATCH the “to-one” relationship (maturity) on the “many” resource (specification):

```
PATCH /api/v2/specifications/7 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 250
Content-Type: application/vnd.api+json
```

```
{
  "data": {
    "type": "specifications",
    "relationships": {
      "maturity": {
        "data": {
          "type": "maturities",
          "id": "5"
        }
      }
    }
  }
}
```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
  "links": {
    "self": "https://browsercompat.org/api/v2/specifications/7"
  },
  "data": {
    "type": "specifications",
    "id": "7",
    "attributes": {
      "slug": "css3-ruby",
      "mdn_key": "CSS3 Ruby",
      "name": {
        "en": "CSS Ruby Layout Module Level 1"
      },
      "uri": {
        "en": "http://dev.w3.org/csswg/css-ruby/"
      }
    },
    "relationships": {
      "maturity": {
        "data": [
          {
            "type": "maturities",
            "id": "5"
          }
        ]
      }
    }
  }
}
```

```
        "links": {
            "self": "https://browsercompat.org/api/v2/specifications/7/
↪relationships/maturity",
            "related": "https://browsercompat.org/api/v2/specifications/7/
↪maturity"
        },
        "data": {
            "type": "maturities",
            "id": "5"
        }
    },
    "sections": {
        "links": {
            "self": "https://browsercompat.org/api/v2/specifications/7/
↪relationships/sections",
            "related": "https://browsercompat.org/api/v2/specifications/7/
↪sections"
        },
        "data": []
    },
    "history_current": {
        "links": {
            "self": "https://browsercompat.org/api/v2/specifications/7/
↪relationships/history_current",
            "related": "https://browsercompat.org/api/v2/specifications/7/
↪history_current"
        },
        "data": {
            "type": "historical_specifications",
            "id": "8"
        }
    },
    "history": {
        "links": {
            "self": "https://browsercompat.org/api/v2/specifications/7/
↪relationships/history",
            "related": "https://browsercompat.org/api/v2/specifications/7/
↪history"
        },
        "data": [
            {
                "type": "historical_specifications",
                "id": "8"
            },
            {
                "type": "historical_specifications",
                "id": "7"
            }
        ]
    }
}
```

Update a relationship via relationship link

An alternate way to change a relationship is to PATCH the relationship endpoint:

```
PATCH /api/v2/specifications/7/relationships/maturity HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 71
Content-Type: application/vnd.api+json
```

```
{
  "data": {
    "type": "maturities",
    "id": "4"
  }
}
```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
  "links": {
    "self": "https://browsercompat.org/api/v2/specifications/7/relationships/
→maturity",
    "related": "https://browsercompat.org/api/v2/specifications/7/maturity"
  },
  "data": {
    "type": "maturities",
    "id": "4"
  }
}
```

Update the order of a one-to-many relationship

For some one-to-many relationships, the order of the to-many relationships matters (for example, version order with respect to browsers, and child features with respect to the parent feature). To change the order, update the order of the relationships on the “one” resource, either by updating the resource or the relationship:

```
PATCH /api/v2/features/2/relationships/children HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 624
Content-Type: application/vnd.api+json
```

```
{
  "data": [
    {
      "type": "features",
      "id": "3"
    },
    {
      "type": "features",
      "id": "4"
    }
  ]
}
```

```
        "type": "features",
        "id": "5"
    },
    {
        "type": "features",
        "id": "7"
    },
    {
        "type": "features",
        "id": "8"
    },
    {
        "type": "features",
        "id": "13"
    },
    {
        "type": "features",
        "id": "9"
    },
    {
        "type": "features",
        "id": "10"
    }
]
}
```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
  "links": {
    "self": "https://browsercompat.org/api/v2/features/2/relationships/children",
    "related": "https://browsercompat.org/api/v2/features/2/children"
  },
  "data": [
    {
      "type": "features",
      "id": "3"
    },
    {
      "type": "features",
      "id": "4"
    },
    {
      "type": "features",
      "id": "5"
    },
    {
      "type": "features",
      "id": "7"
    },
    {
      "type": "features",
      "id": "8"
    }
  ]
}
```

```

        "type": "features",
        "id": "13"
    },
    {
        "type": "features",
        "id": "9"
    },
    {
        "type": "features",
        "id": "10"
    }
]
}

```

Revert to previous revision

To revert an instance to a previous revision, set the `history_current` relationship to the history ID of the previous revision. This resets the content and creates a new history object for the change:

```

PATCH /api/v2/features/12 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 281
Content-Type: application/vnd.api+json

```

```

{
  "data": {
    "type": "features",
    "id": "12",
    "relationships": {
      "history_current": {
        "data": {
          "type": "historical_features",
          "id": "12"
        }
      }
    }
  }
}

```

A sample response is:

```

HTTP/1.1 200 OK
Content-Type: application/vnd.api+json

```

```

{
  "links": {
    "self": "https://browsercompat.org/api/v2/features/12"
  },
  "data": {
    "type": "features",
    "id": "12",
    "attributes": {
      "slug": "web-css-transform-three-value-syntax",
      "mdn_uri": null,
    }
  }
}

```

```
"experimental": false,
"standardized": true,
"stable": true,

        },  
        {  
            "type": "historical_features",  
            "id": "16"  
        },  
        {  
            "type": "historical_features",  
            "id": "12"  
        }  
    ]  
}  
}
```

Delete a resource

To delete a resource:

```
DELETE /api/v1/versions/49 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 0
```

The response has no body:

```
HTTP/1.1 204 NO CONTENT
```

Revert a deletion

Reverting deletions is not currently possible, and is tracked in [bug 1159349](#).

Resources

Resources are simple objects supporting [CRUD](#) operations. Read operations can be done anonymously. Creating and updating require account permissions, and deleting requires admin account permissions.

Browsers

A **browser** is a brand of web client that has one or more versions. This follows most users' understanding of browsers, i.e., `firefox_desktop` represents desktop Firefox, `safari_desktop` represents desktop Safari, and `firefox_android` represents Firefox on Android.

The **browsers** representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **slug** (*write-once*) - Unique, human-friendly slug
 - **name** (*localized*) - Browser name
 - **note** (*localized*) - Notes, intended for related data like OS, applicable device, engines, etc.
- **relationships**
 - **versions** (*many*) - Associated `versions`, ordered roughly from earliest to latest. User can change the order.
 - **history_current** (*one*) - Current `historical_browsers`. Can be set to a value from **history** to revert changes.
 - **history** (*many*) - Associated `historical_browsers` in time order (most recent first). Changes are ignored.

Note: bug 1078699 is proposing that select users will be able to modify slugs

An example **browser** resource:

```
{
  "links": {
    "self": "https://browsercompat.org/api/v2/browsers/7"
  },
  "data": {
    "type": "browsers",
    "id": "7",
    "attributes": {
      "slug": "firefox_desktop",
      "name": {
        "en": "Firefox for Desktop"
      },
      "note": null
    },
    "relationships": {
      "versions": {
        "links": {
          "self": "https://browsercompat.org/api/v2/browsers/7/
↪relationships/versions",
          "related": "https://browsercompat.org/api/v2/browsers/7/versions"
        },
        "data": [
          {
            "type": "versions",
            "id": "17"
          },
          {
            "type": "versions",
            "id": "18"
          },
          {
            "type": "versions",
            "id": "19"
          },
          {
            "type": "versions",
            "id": "20"
          },
          {
            "type": "versions",
            "id": "21"
          }
        ]
      },
      "history_current": {
        "links": {
          "self": "https://browsercompat.org/api/v2/browsers/7/
↪relationships/history_current",
          "related": "https://browsercompat.org/api/v2/browsers/7/history_
↪current"
        },
        "data": {
          "type": "historical_browsers",
          "id": "7"
        }
      },
      "history": {
        "links": {
          "self": "https://browsercompat.org/api/v2/browsers/7/
↪relationships/history"
        }
      }
    }
  }
}
```

```
        "self": "https://browsercompat.org/api/v2/browsers/7/
→relationships/history",
        "related": "https://browsercompat.org/api/v2/browsers/7/history"
    },
    "data": [
        {
            "type": "historical_browsers",
            "id": "7"
        }
    ]
}
}
```

Versions

A **version** is a specific release of a Browser.

The **versions** representation includes:

- **attributes**

- **id** (*server selected*) - Database ID
- **version** (*write-once*) - Version of browser. Numeric or text string, depending on the status (see table below).
- **release_day** - Day that browser was released in ISO 8601 format, or null if unknown.
- **retirement_day** - Approximate day the browser was “retired” (stopped being a current browser), in ISO 8601 format, or null if unknown.
- **status** - One of beta, current, future, retired-beta, retired, or unknown (see table below).
- **release_notes_uri** (*localized*) - URI of release notes for this version, or null if none.
- **note** (*localized*) - Engine, OS, etc. information, or null
- **order** (*read-only*) - The relative order among versions for this browser. The order can be changed on the **browser** resource.

- **relationships**

- **browser** - The related **browser**
- **supports** (*many*) - Associated **supports**, in ID order. Changes are ignored; work on the **supports** to add, change, or remove.
- **history_current** (*one*) - Current **historical_versions**. Set to a value from **history** to revert to that version.
- **history** (*many*) - Associated **historical_versions**, in time order (most recent first). Changes are ignored.

The version is either a numeric value, such as "11.0", or text, such as "Nightly". The version format depends on the chosen status:

Status	Version	Meaning
beta	numeric	A release candidate suggested for early adopters or testers
current	numeric or the text "current"	A current and preferred release for most users
future	text such as "Nightly"	A named but unnumbered future release
retired-beta	numeric	An old beta version, replaced by a new beta or release
retired	numeric	An old released version no longer recommended for users
unknown	numeric	A release with an unknown status

An example **version** resource:

```
{
  "links": {
    "self": "https://browsercompat.org/api/v2/versions/21"
  },
  "data": {
    "type": "versions",
    "id": "21",
    "attributes": {
      "version": "16.0",
      "release_day": "2012-10-09",
      "retirement_day": "2012-11-20",
      "status": "retired",
      "release_notes_uri": {
        "en": "https://developer.mozilla.org/en/Firefox/Releases/16",
        "de": "https://developer.mozilla.org/de/Firefox/Releases/16",
        "es": "https://developer.mozilla.org/es/Firefox/Releases/16",
        "fr": "https://developer.mozilla.org/fr/Firefox/Versions/16",
        "ja": "https://developer.mozilla.org/ja/Firefox/Releases/16",
        "ko": "https://developer.mozilla.org/ko/Firefox/Releases/16",
        "pl": "https://developer.mozilla.org/pl/Firefox/Releases/16",
        "pt-PT": "https://developer.mozilla.org/pt-PT/Firefox/Releases/16",
        "ru": "https://developer.mozilla.org/ru/Firefox/Releases/16",
        "zh-CN": "https://developer.mozilla.org/zh-CN/Firefox/Releases/16",
        "zh-TW": "https://developer.mozilla.org/zh-TW/Firefox/Releases/16"
      },
      "note": null,
      "order": 4
    },
    "relationships": {
      "browser": {
        "links": {
          "self": "https://browsercompat.org/api/v2/versions/21/

          "related": "https://browsercompat.org/api/v2/versions/21/browser"
        },
        "data": {
          "type": "browsers",
          "id": "7"
        }
      },
      "supports": {
        "links": {
          "self": "https://browsercompat.org/api/v2/versions/21/
→relationships/supports",
          "related": "https://browsercompat.org/api/v2/versions/21/supports"
        }
      }
    }
  }
}
```

```
        },
        "data": [
            {
                "type": "supports",
                "id": "12"
            },
            {
                "type": "supports",
                "id": "22"
            }
        ]
    },
    "history_current": {
        "links": {
            "self": "https://browsercompat.org/api/v2/versions/21/
←relationships/history_current",
            "related": "https://browsercompat.org/api/v2/versions/21/history_
↪current"
        },
        "data": {
            "type": "historical_versions",
            "id": "21"
        }
    },
    "history": {
        "links": {
            "self": "https://browsercompat.org/api/v2/versions/21/
←relationships/history",
            "related": "https://browsercompat.org/api/v2/versions/21/history"
        },
        "data": [
            {
                "type": "historical_versions",
                "id": "21"
            }
        ]
    }
}
}
```

Features

A **feature** is a web technology. This could be a precise technology, such as the value `cover` for the CSS `background-size` property. It could be a hierarchical group of related technologies, such as the CSS `background-size` property or the set of all CSS properties. Some features correspond to a page on [MDN](#), which will display the list of specifications and a browser compatibility table of the sub-features.

The **features** representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **slug** (*write-once*) - Unique, human-friendly slug
 - **mdn_uri** (*optional, localized*) - The URI of the language-specific MDN page that this feature was first scraped from. If the path contains unicode, it should be percent-encoded as in [RFC 3987](#). May

be used in UX or for debugging import scripts.

- **experimental** - True if a feature is considered experimental, such as being non-standard or part of an non-ratified spec.
- **standardized** - True if a feature is described in a standards-track spec, regardless of the spec's maturity.
- **stable** - True if a feature is considered suitable for production websites.
- **obsolete** - True if a feature should not be used in new development.
- **name** (*canonical or localized*) - Feature name. If the name is the code used by a developer, then the value is a string, and should be wrapped in a `<code>` block when displayed. If the name is a description of the feature, then the value is the available translations, including at least an en translation, and may include HTML markup. For example, "display" and "display: none" are canonical names for the CSS display property and one of the values for that property, while "`Basic support`", "`<code>none, inline</code>`" and "`<code>block</code>`", and "CSS Properties" are non-canonical names that should be translated.

- **relationships**

- **sections** (*many*) - Associated *sections*. Order can be changed by the user.
- **supports** (*many*) - Associated *supports*, Order is in ID order, changes are ignored.
- **parent** (*one or null*) - The feature one level up, or null if top-level. Can be changed by user.
- **children** (*many*) - The features that have this feature as parent, in display order. Can be an empty list, for “leaf” features. Can be re-ordered by the user.
- **history_current** (*one*) - Current *historical_features*. User can set to a valid **history** to revert to that version.
- **history** (*many*) - Associated *historical_features*, in time order (most recent first). Changes are ignored.

Note: bug 1240785 is proposing that the slug is replaced with a list of optional aliases

Here is an example of a leaf **feature** with a translated name:

```
{
  "links": {
    "self": "https://browsercompat.org/api/v2/features/12"
  },
  "data": {
    "type": "features",
    "id": "12",
    "attributes": {
      "slug": "web-css-transform-three-value-syntax",
      "mdn_uri": null,
      "experimental": false,
      "standardized": true,
      "stable": true,
      "obsolete": false,
      "name": {
        "en": "Three-value syntax",
        "es": "Sintaxis con tres valores",
        "ja": "3-"
      }
    },
    "relationships": {
      "parent": {
        "id": "11"
      }
    }
  }
}
```

```
        "links": {
            "self": "https://browsercompat.org/api/v2/features/12/
↪relationships/parent",
            "related": "https://browsercompat.org/api/v2/features/12/parent"
        },
        "data": {
            "type": "features",
            "id": "10"
        }
    },
    "children": {
        "links": {
            "self": "https://browsercompat.org/api/v2/features/12/
↪relationships/children",
            "related": "https://browsercompat.org/api/v2/features/12/children"
        },
        "data": []
    },
    "references": {
        "links": {
            "self": "https://browsercompat.org/api/v2/features/12/

            "related": "https://browsercompat.org/api/v2/features/12/
↪references"
        },
        "data": []
    },
    "supports": {
        "links": {
            "self": "https://browsercompat.org/api/v2/features/12/
↪relationships/supports",
            "related": "https://browsercompat.org/api/v2/features/12/supports"
        },
        "data": [
            {
                "type": "supports",
                "id": "20"
            },
            {
                "type": "supports",
                "id": "21"
            },
            {
                "type": "supports",
                "id": "22"
            },
            {
                "type": "supports",
                "id": "23"
            },
            {
                "type": "supports",
                "id": "24"
            },
            {
                "type": "supports",
                "id": "25"
            }
        ]
    }
}
```

```
{
    "type": "supports",
    "id": "26"
}
],
},
"history_current": {
    "links": {
        "self": "https://browsercompat.org/api/v2/features/12/
↪relationships/history_current",
        "related": "https://browsercompat.org/api/v2/features/12/history_
↪current"
    },
    "data": {
        "type": "historical_features",
        "id": "12"
    }
},
"history": {
    "links": {
        "self": "https://browsercompat.org/api/v2/features/12/
↪relationships/history",
        "related": "https://browsercompat.org/api/v2/features/12/history"
    },
    "data": [
        {
            "type": "historical_features",
            "id": "12"
        }
    ]
}
}
}
```

Here is an example of a branch **feature** with a canonical name (the parent of the previous example):

```
{
    "links": {
        "self": "https://browsercompat.org/api/v2/features/10"
    },
    "data": {
        "type": "features",
        "id": "10",
        "attributes": {
            "slug": "web-css-transform-origin",
            "mdn_uri": {
                "en": "https://developer.mozilla.org/en-US/docs/Web/CSS/transform-
↪origin",
                "es": "https://developer.mozilla.org/es/docs/Web/CSS/transform-origin
↪",
                "fr": "https://developer.mozilla.org/fr/docs/Web/CSS/transform-origin
↪",
                "ja": "https://developer.mozilla.org/ja/docs/Web/CSS/transform-origin"
            },
            "experimental": false,
            "standardized": true,
            "stable": true,
        }
    }
}
```

```
        "obsolete": false,
        "name": "transform-origin"
    },
    "relationships": {
        "parent": {
            "links": {
                "self": "https://browsercompat.org/api/v2/features/10/
↪relationships/parent",
                "related": "https://browsercompat.org/api/v2/features/10/parent"
            },
            "data": {
                "type": "features",
                "id": "2"
            }

        ↵relationships/history",
        "related": "https://browsercompat.org/api/v2/features/10/history"
    },
    "data": [
        {
            "type": "historical_features",
            "id": "10"
        }
    ]
}
}
}
```

Supports

A **support** is an assertion that a particular Version of a Browser supports (or does not support) a feature.

The **support** representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **support** - Assertion of support of the *version* for the *feature*, one of "yes", "no", "partial", or "unknown"
 - **prefix** - Prefix used to enable support, such as "moz"
 - **prefix_mandatory** - True if the prefix is required
 - **alternate_name** - An alternate name associated with this feature, such as "RTCPeerConnectionIdentityEvent"
 - **alternate_name_mandatory** - True if the alternate name is required
 - **requires_config** - A configuration string required to enable the feature, such as "media.peerconnection.enabled=on"
 - **default_config** - The configuration string in the shipping browser, such as "media.peerconnection.enabled=off"
 - **protected** - True if the feature requires additional steps to enable in order to protect the user's security or privacy, such as geolocation and the Bluetooth API.
 - **note** (*localized*) - Note on support, designed for display after a compatibility table, can contain HTML
 - **relationships**

- **version** (*one*) - The associated *version*. Cannot be changed by the user after creation.
- **feature** (*one*) - The associated *feature*. Cannot be changed by the user after creation. The version and feature combo must be unique.
- **history_current** (*one*) - Current *historical_supports*. Can be changed to a valid **history** to revert to that version.
- **history** (*many*) - Associated *historical_supports* in time order (most recent first). Changes are ignored.

Here is a sample **support**:

}
```

Specifications

A **specification** is a standards document that specifies a web technology.

The **specification** representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **slug** - Unique, human-friendly key
 - **mdn_key** - Key used in the KumaScript macros `SpecName` and `Spec2`.
 - **name** (*localized*) - Specification name
 - **uri** (*localized*) - Specification URI, without subpath and anchor
- **relationships**
 - **maturity** (*one*) - Associated *maturity*. Can be changed by the user.
 - **sections** (*many*) - Associated *sections*. The order can be changed by the user.
 - **history_current** (*one*) - Current *historical_specifications*. Can be changed to a valid **history** to revert to that version.
 - **history** (*many*) - Associated *historical_specifications* in time order (most recent first). Changes are ignored.

Here is a sample **specification**:

```
{
    "links": {

}
}
```

Sections

A **section** refers to a specific area of a *specification* document.

The **section** representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **number** (*optional, localized*) - The section number
 - **name** (*localized*) - Section name
 - **subpath** (*localized, optional*) - A subpage (possibly with an #anchor) to get to the subsection in the doc. Can be empty string.
- **relationships**
 - **specification** (*one*) - The *specification*. Can be changed by the user.
 - **references** (*many*) - The associated *references*. In ID order, changes are ignored.
 - **history_current** (*one*) - Current *historical_sections*. Can be changed to a valid **history** to revert to that version.
 - **history** (*many*) - Associated *historical_sections* in time order (most recent first). Changes are ignored.

Here is a sample **section**:

```
{
  "links": {
    "self": "https://browsercompat.org/api/v2/sections/3"
  },
  "data": {
    "type": "sections",
    "id": "3",
    "attributes": {
      "number": {
        "en": "16"
      },
      "name": {
        "en": "The float property"
      },
      "subpath": {
        "en": "#the-float-property"
      }
    },
    "relationships": {
      "references": {
        "data": [
          {
            "type": "historical_references",
            "id": "1"
          }
        ]
      }
    }
  }
}
```

```
        "links": {
            "self": "https://browsercompat.org/api/v2/sections/3/
            ↵relationships/references",
            "related": "https://browsercompat.org/api/v2/sections/3/references
            ↵"
        },
        "data": [
            {
                "type": "references",
                "id": "3"
            }
        ]
    },
    "specification": {
        "links": {
            "self": "https://browsercompat.org/api/v2/sections/3/
            ↵relationships/specification",
            "related": "https://browsercompat.org/api/v2/sections/3/
            ↵specification"
        },
        "data": {
            "type": "specifications",
            "id": "3"
        }
    },
    "history_current": {
        "links": {
            "self": "https://browsercompat.org/api/v2/sections/3/
            ↵relationships/history_current",
            "related": "https://browsercompat.org/api/v2/sections/3/history_
            ↵current"
        },
        "data": {
            "type": "historical_sections",
            "id": "3"
        }
    },
    "history": {
        "links": {
            "self": "https://browsercompat.org/api/v2/sections/3/
            ↵relationships/history",
            "related": "https://browsercompat.org/api/v2/sections/3/history"
        },
        "data": [
            {
                "type": "historical_sections",
                "id": "3"
            }
        ]
    }
}
```

References

A **reference** ties a specification *section* to a *feature*.

The **reference** representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **note** (*localized, optional*) - Notes for this reference
- **links**
 - **feature** (*one*) - The feature. Can be changed by the user.
 - **section** (*one*) - The section. Can be changed by the user.
 - **history_current** (*one*) - Current *historical_references*. Can be changed to a valid **history** to revert to that version.
 - **history** (*many*) - Associated *historical_references* in time order (most recent first). Changes are ignored.

Here is a sample **reference**:

```
{
  "links": {
    "self": "https://browsercompat.org/api/v2/references/3"
  },
  "data": {
    "type": "references",
    "id": "3",
    "attributes": {
      "note": {
        "en": "Lots of new values, not all clearly defined yet. Any\u2191
        ↪differences in behavior unrelated to new features are expected to be unintentional;\u2191
        ↪please report."
      }
    },
    "relationships": {
      "feature": {
        "links": {
          "self": "https://browsercompat.org/api/v2/references/3/
        ↪relationships/feature",
          "related": "https://browsercompat.org/api/v2/references/3/feature"
        },
        "data": {
          "type": "features",
          "id": "5"
        }
      },
      "section": {
        "links": {
          "self": "https://browsercompat.org/api/v2/references/3/
        ↪relationships/section",
          "related": "https://browsercompat.org/api/v2/references/3/section"
        },
        "data": {
          "type": "sections",
          "id": "3"
        }
      },
      "history_current": {
        "links": {
          "self": "https://browsercompat.org/api/v2/references/3/
        ↪relationships/history_current",
        
```

```
        "related": "https://browsercompat.org/api/v2/references/3/history_"
    ↵current"
    },
    "data": {
        "type": "historical_references",
        "id": "3"
    }
},
"history": {
    "links": {
        "self": "https://browsercompat.org/api/v2/references/3/
    ↵relationships/history",
        "related": "https://browsercompat.org/api/v2/references/3/history"
    },
    "data": [
        {
            "type": "historical_references",
            "id": "3"
        }
    ]
}
}
}
}
```

Maturities

A **maturity** refers to the maturity of a *specification* document.

The **maturity** representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **slug** - A human-friendly identifier for this maturity. When applicable, it matches the key in the KumaScript macro `Spec2`
 - **name** (*localized*) - Status name
- **relationships**
 - **specifications** (*many*) - Associated *specifications*. In ID order, changes are ignored.
 - **history_current** (*one*) - Current *historical_maturities*. Can be changed to a valid **history** to revert to that version.
 - **history** (*many*) - Associated *historical_maturities* in time order (most recent first). Changes are ignored.

Here is a sample **maturity**:

```
{
    "links": {
        "self": "https://browsercompat.org/api/v2/maturities/1"
    },
    "data": {
        "type": "maturities",
        "id": "1",
        "attributes": {
```

```

    "slug": "REC",
    "name": {
        "en": "Recommendation",
        "de": "Empfehlung",
        "ja": "",
        "ru": ""
    }
},
"relationships": {
    "specifications": {
        "links": {
            "self": "https://browsercompat.org/api/v2/maturities/1/
↪relationships/specifications",
            "related": "https://browsercompat.org/api/v2/maturities/1/
↪specifications"
        },
        "data": [
            {
                "type": "specifications",
                "id": "1"
            },
            {
                "type": "specifications",
                "id": "2"
            },
            {
                "type": "specifications",
                "id": "6"
            }
        ]
    },
    "history_current": {
        "links": {
            "self": "https://browsercompat.org/api/v2/maturities/1/
↪relationships/history_current",
            "related": "https://browsercompat.org/api/v2/maturities/1/history_
↪current"
        },
        "data": [
            {
                "type": "historical_maturities",
                "id": "1"
            }
        ]
    },
    "history": {
        "links": {
            "self": "https://browsercompat.org/api/v2/maturities/1/
↪relationships/history",
            "related": "https://browsercompat.org/api/v2/maturities/1/history"
        },
        "data": [
            {
                "type": "historical_maturities",
                "id": "1"
            }
        ]
    }
}
}

```

```
}
```

Users

A **user** represents a person or process that creates, changes, or deletes a resource.

The representation includes:

- **attributes**

- **id** (*server selected*) - Database ID
- **username** - The user's email or ID
- **created** (*server selected*) - Time that the account was created, in ISO 8601 format.
- **agreement** - The version of the contribution agreement the user has accepted. “0” for not agreed, “1” for first version, etc.
- **permissions** - A list of permissions. Permissions include "change-resource" (add or change any resource except *users* or history resources), "delete-resource" (delete any resource) "import-mdn" (setup import of an MDN page)

- **relationships**

- **changesets** (*many*) - Associated *changesets*, in ID order, changes are ignored.

Here's an example **user**:

```
{
  "links": {
    "self": "https://browsercompat.org/api/v2/users/1"
  },
  "data": {
    "type": "users",
    "id": "1",
    "attributes": {
      "username": "user",
      "created": "2016-01-08T22:21:50.254130Z",
      "agreement": 0,
      "permissions": [
        "change-resource",
        "delete-resource"
      ]
    },
    "relationships": {
      "changesets": {
        "links": {
          "self": "https://browsercompat.org/api/v2/users/1/relationships/
↪changesets",
          "related": "https://browsercompat.org/api/v2/users/1/changesets"
        },
        "data": [
          {
            "type": "changesets",
            "id": "1"
          }
        ]
      }
    }
}
```

```

    }
}
```

You can also request the authenticated user's resource:

```
GET /api/v2/users/me HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
```

The response is a redirect to the user's resource:

```
HTTP/1.1 302 FOUND
Content-Type: text/html; charset=utf-8
Location: https://browsercompat.org/api/v2/users/1
```

If the request is made anonymously, then the response is an error:

```
HTTP/1.1 401 UNAUTHORIZED
Content-Type: application/vnd.api+json
WWW-Authenticate: Bearer realm="api"
```

```
{
  "errors": [
    {
      "detail": "Authentication credentials were not provided.",
      "status": "401"
    }
  ]
}
```

Changesets

A **changeset** collects history resources into a logical unit, allowing for faster reversions and better history display. The **changeset** can be auto-created through a POST, PUT, or DELETE to a resource, or it can be created independently and specified by adding `changeset=<ID>` URI parameter (i.e., `PUT /browsers/15?changeset=73`).

The representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **created** (*server selected*) - When the changeset was created, in ISO 8601 format.
 - **modified** (*server selected*) - When the changeset was last modified, in ISO 8601 format.
 - **target_resource_type** (*write-once, optional*) - The name of the primary resource for this changeset, for example “browsers”, “versions”, etc.
 - **target_resource_id** (*write-once, optional*) - The ID of the primary resource for this changeset.
 - **closed** - True if the changeset is closed to new changes. Auto-created changesets are auto-closed, and cache invalidation is delayed until manually created changesets are closed.
- **relationships**
 - **user** (*one*) - The *user* who initiated this changeset, can not be changed.
 - **historical_browsers** (*many*) - Associated *historical_browsers*, in ID order, changes are ignored.

- **historical_features** (*many*) - Associated *historical_features*, in ID order, changes are ignored.
- **historical_maturities** (*many*) - Associated *historical_maturities*, in ID order, changes are ignored.
- **historical_sections** (*many*) - Associated *historical_sections*, in ID order, changes are ignored.
- **historical_specifications** (*many*) - Associated *historical_specifications*, in ID order, changes are ignored.
- **historical_supports** (*many*) - Associated *historical_supports*, in ID order, changes are ignored.
- **historical_versions** (*many*) - Associated *historical_versions*, in ID order, changes are ignored.

Here's an example **changeset** resource:

```
{  
    "links": {  
        "self": "https://browsercompat.org/api/v2/changesets/2"  
    },  
    "data": {  
        "type": "changesets",  
        "id": "2",  
        "attributes": {  
            "created": "2016-01-14T17:24:04.159902Z",  
            "modified": "2016-01-14T17:24:30.537134Z",  
            "closed": true,  
            "target_resource_type": null,  
            "target_resource_id": null  
        },  
        "relationships": {  
            "user": {  
                "links": {  
                    "self": "https://browsercompat.org/api/v2/changesets/2/  
→relationships/user",  
                    "related": "https://browsercompat.org/api/v2/changesets/2/user"  
                },  
                "data": {  
                    "type": "users",  
                    "id": "1"

Historical Browsers

A **historical_browser** resource represents the state of a *browser* at a point in time, and who is responsible for that state. The representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **date** (*server selected*) - The time of this change in ISO 8601
 - **event** (*server selected*) - The type of event, one of "created", "changed", or "deleted"
 - **archive_data** - The **browsers** representation at this point in time
- **relationships**
 - **changeset** (*one*) - Associated *changeset*, can not be changed.
 - **browser** (*one*) - Associated *browser*, can not be changed

Here is a sample **historical_browser**:

```
{
  "links": {
    "self": "https://browsercompat.org/api/v2/historical_browsers/17"
  },
  "data": {
    "type": "historical_browsers",
    "id": "17",
    "attributes": {
      "date": "2016-01-14T06:30:59.618000Z",
      "event": "created",
      "archive_data": {
        "type": "browsers",
        "id": "17",
        "attributes": {
          "slug": "konqueror",
          "name": {
            "en": "Konqueror"
          },
          "note": {
            "en": "First comes the Navigator, then Explorer, and then the\u202e\u202e\u202e Konqueror."
          }
        }
      },
      "relationships": {
        "versions": {
          "data": []
        },
        "history_current": {
          "data": [
            {
              "type": "historical_browsers",
              "id": "17"
            }
          ]
        }
      }
    }
  }
}
```

```

        "links": {
            "self": "https://browsercompat.org/api/v2/browsers/17"
        }
    },
    "relationships": {
        "changeset": {
            "links": {
                "self": "https://browsercompat.org/api/v2/historical_browsers/17/
→relationships/changeset",
                "related": "https://browsercompat.org/api/v2/historical_browsers/
→17/changeset"
            },
            "data": {
                "type": "changesets",
                "id": "3"
            }
        },
        "browser": {
            "links": {
                "self": "https://browsercompat.org/api/v2/historical_browsers/17/
→relationships/browser",
                "related": "https://browsercompat.org/api/v2/historical_browsers/

            },
            "data": {
                "type": "browsers",
                "id": "17"
            }
        }
    }
}

```

Historical Versions

A **historical_versions** resource represents the state of a *version* at a point in time, and who is responsible for that representation. The representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **date** (*server selected*) - The time of this change in ISO 8601
 - **event** (*server selected*) - The type of event, one of "created", "changed", or "deleted"
 - **archive_data** - The **versions** representation at this point in time
- **relationships**
 - **changeset** (*one*) - Associated *changeset*, can not be changed.
 - **version** (*one*) - Associated *version*, can not be changed

Here is a sample **historical_version**:

```
{
    "links": {
        "self": "https://browsercompat.org/api/v2/historical_versions/49"
}
```

```
},
  "data": {
    "type": "historical_versions",
    "id": "49",
    "attributes": {

    }
}
```

Historical Sections

A **historical_sections** resource represents the state of a **section** at a point in time, and who is responsible for that representation. The representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **date** (*server selected*) - The time of this change in ISO 8601
 - **event** (*server selected*) - The type of event, one of "created", "changed", or "deleted"
 - **archive_data** - The **sections** representation at this point in time
- **relationships**
 - **changeset** (*one*) - Associated **changeset**, can not be changed.
 - **section** (*one*) - Associated **section**, can not be changed

Here is a sample **historical_section**:

```
{
    "links": {
        "self": "https://browsercompat.org/api/v2/historical_sections/8"
    },
    "data": {
        "type": "historical_sections",
        "id": "8",
```

```

"attributes": {
    "date": "2016-01-14T08:05:47.948000Z",
    "event": "created",
    "archive_data": {
        "type": "sections",
        "id": "8",
        "attributes": {
            "number": {
                "en": "2.1"
            },
            "name": {
                "en": "Ruby-specific 'display' Values"
            },

        },
        "data": {
            "type": "sections",
        }
    }
}

```

```
        "id": "8"
    }
}
}
}
}
```

Historical References

A **historical_references** resource represents the state of a *reference* at a point in time, and who is responsible for that representation. The representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **date** (*server selected*) - The time of this change in ISO 8601
 - **event** (*server selected*) - The type of event, one of "created", "changed", or "deleted"
 - **archive_data** - The **references** representation at this point in time
- **relationships**
 - **changeset** (*one*) - Associated *changeset*, can not be changed.
 - **reference** (*one*) - Associated *reference*, can not be changed

Here is a sample **historical_reference**:

```
{
  "links": {
    "self": "https://browsercompat.org/api/v2/historical_references/5"
  },
  "data": {
    "type": "historical_references",
    "id": "5",
    "attributes": {
      "date": "2016-02-23T10:41:02.217000Z",
      "event": "created",
      "archive_data": {
        "type": "references",
        "id": "5",
        "attributes": {
          "note": null
        },
        "relationships": {
          "feature": {
            "data": {
              "type": "features",
              "id": "18"
            }
          },
          "section": {
            "data": {
              "type": "sections",
              "id": "6"
            }
          }
        },
        "history_current": {
          "type": "history",
          "id": "1"
        }
      }
    }
  }
}
```

```
        "data": {
            "type": "historical_references",
            "id": "5"
        }
    },
    "links": {
        "self": "https://browsercompat.org/api/v2/references/5"
    }
}
},
"relationships": {
    "changeset": {
        "links": {
            "self": "https://browsercompat.org/api/v2/historical_references/5/relationships/changeset",
            "related": "https://browsercompat.org/api/v2/historical_references/5/changeset"
        },
        "data": {
            "type": "changesets",
            "id": "29"
        }
    },
    "reference": {
        "links": {
            "self": "https://browsercompat.org/api/v2/historical_references/5/relationships/reference",
            "related": "https://browsercompat.org/api/v2/historical_references/5/reference"
        },
        "data": {
            "type": "references",
            "id": "5"
        }
    }
}
}
```

Historical Maturities

A **historical_maturities** resource represents the state of a *maturity* at a point in time, and who is responsible for that representation. The representation includes:

- **attributes**
 - **id** (*server selected*) - Database ID
 - **date** (*server selected*) - The time of this change in ISO 8601
 - **event** (*server selected*) - The type of event, one of "created", "changed", or "deleted"
 - **archive_data** - The **maturities** representation at this point in time
 - **relationships**
 - **changeset** (*one*) - Associated *changeset*, can not be changed.

- **maturity** (*one*) - Associated *maturity*, can not be changed

Here is a sample **historical_maturity**:

```
{  
    "links": {  
        "self": "https://browsercompat.org/api/v2/historical_maturities/10"  
    },  
    "data": {  
        "type": "historical_maturities",  
        "id": "10",  
        "attributes": {  
            "date": "2016-01-14T08:04:58.382000Z",  
            "event": "created",  
            "archive_data": {  
                "type": "maturities",  
                "id": "10",  
                "attributes": {  
                    "slug": "Idea",  
                    "name": {  
                        "en": "Idea"  
                    }  
                },  
                "relationships": {  
                    "history_current": {  
                        "data": {  
                            "type": "historical_maturities",  
                            "id": "10"  
                        }  
                    }  
                },  
                "links": {  
                    "self": "https://browsercompat.org/api/v2/maturities/10"  
                }  
            }  
        },  
        "relationships": {  
            "changeset": {  
                "links": {

↪10/relationships/maturity",  
                    "related": "https://browsercompat.org/api/v2/historical_  
↪maturities/10/maturity"  
                },  
                "data": {  
                    "type": "maturities",  
                    "id": "10"  
                }  
            }  
        }  
    }  
}
```

```

        }
    }
}
}
}
```

Views

A **View** is a combination of resources for a particular presentation. It is suitable for anonymous viewing of content. It uses the flexibility of the JSON API specification to include a basket of related resources in a response, but doesn't use the official method of Inclusion of Related Resources.

View a Feature

This view collects the data for a feature, including the related resources needed to display it on MDN.

Here is a simple example, the view for the CSS property float:

```
GET /api/v2/view_features/5 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{

}
}
```

Generating a Compatibility Table

One way to use this representation is:

- Parse /data and /included into an in-memory object store, so that you can load a resource given the type and ID.
 - Create the “Specifications” section:**
 - Add the Specifications header
 - Create an HTML table with a header row “Specification”, “Status”, “Comment”
 - For each id in /data/relationships/sections ("1", "2", "3"):**
 - Load the section, specification, and maturity
 - Add the first column: a link to (specification).attributes.uri.(lang or en) + (section).attributes.subpath.(lang or en), with link text (specification).attributes.name.(lang or en), with title based on (section).attributes.name.(lang or en) or data.attributes.name.(lang or en).
 - Add the second column: A span with class “spec-” + (maturity).attributes.slug, and the text (maturity).attributes.name.(lang or en).
 - Add the third column: (maturity).attributes.notes.(lang or en), or empty string
 - Close the table, and add an edit button.
 - Create the Browser Compatibility section:**
 - Add The “Browser compatibility” header
 - For each item in /meta/compat_table/tabs:**
 - Create a table with the proper name (“Desktop”, “Mobile”)
 - Load the browser by ID in /browsers
 - Add a column the translated browser name
 - For the main feature in /data and each feature in /data/relationships/children:**
 - Add the first column: the feature name (attributes/name). If it is a string, then wrap in <code>. Otherwise, use the best translation of name, in a lang=(lang) block. A good name for the main feature is “Basic Support”.
 - Add any feature flags, such as an obsolete or experimental icon, based on the feature flags.

- Load the supports reference list in /meta/compat_table/supports/(feature ID)/(browser ID)/(support IDs)
- **For each browsers' supports reference list:**
 - If no supports, then display “?”
 - If just one support, display “<version>”, or “<support>”, depending on the defined attributes
 - If multiple supports, display as subcells
 - Add prefixes, alternate names, config, and notes link as appropriate

(d) Close each table, add an edit button

(e) Add notes for displayed supports

This may be done by including the JSON in the page as sent over the wire, or loaded asynchronously, with the tables built after initial page load.

This can also be used by a “caniuse” table layout by ignoring the meta section and displaying all the included data. This will require more client-side processing to generate, or additional data in the <meta> section.

Including Child Pages

By default, view_feature only includes *row children*, which are subfeatures that are represented as rows in the MDN table. These row children are identified by not having a value for mdn_uri.

There can also be *page children*, which are represented as more detailed page on MDN. For example, Web/CSS has the page child Web/CSS/Display. By default, these are not included, but can be included by setting the query parameter child_pages=1:

```
GET /api/v2/view_features/2?child_pages=1 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
```

Updating Views with Changesets

Updating the page requires a sequence of requests. For example, if a user wants to change Chrome support for <address> from an unknown version to version 2, you'll have to create the version for that version, then add the support for the support.

The first step is to create a changeset as an authenticated user:

```
POST /api/v2/changesets HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 173
Content-Type: application/vnd.api+json
```

```
{
  "data": {
    "type": "changesets",
    "attributes": {
      "target_resource_type": "features",
      "target_resource_id": "6"
    }
  }
}
```

```

        }
    }
}
```

A sample response is:

```
HTTP/1.1 201 CREATED
Content-Type: application/vnd.api+json
```

```
{
  "links": {
    "self": "https://browsercompat.org/api/v2/changesets"
  },

```

```
        },
        "data": []
    },
    "historical_references": {
        "links": {
            "self": "https://browsercompat.org/api/v2/changesets/
↪relationships/historical_references",
            "related": "https://browsercompat.org/api/v2/changesets/
↪historical_references"
        },
        "data": []
    },
    "historical_sections": {
        "links": {
            "self": "https://browsercompat.org/api/v2/changesets/
↪relationships/historical_sections",
            "related": "https://browsercompat.org/api/v2/changesets/
↪historical_sections"
        },
        "data": []
    },
    "historical_specifications": {
        "links": {
            "self": "https://browsercompat.org/api/v2/changesets/
↪relationships/historical_specifications",
            "related": "https://browsercompat.org/api/v2/changesets/
↪historical_specifications"
        },
        "data": []
    },
    "historical_supports": {
        "links": {
            "self": "https://browsercompat.org/api/v2/changesets/
↪relationships/historical_supports",
            "related": "https://browsercompat.org/api/v2/changesets/
↪historical_supports"
        },
        "data": []
    },
    "historical_versions": {
        "links": {
            "self": "https://browsercompat.org/api/v2/changesets/
↪relationships/historical_versions",
            "related": "https://browsercompat.org/api/v2/changesets/
↪historical_versions"
        },
        "data": []
    }
}
}
```

Next, use the changeset ID when creating the version:

```
POST /api/v2/versions?use_changeset=55 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
```

```
Content-Length: 338
Content-Type: application/vnd.api+json
```

```
{
  "data": {
    "type": "versions",
    "attributes": {
      "version": "2.0",
      "status": "retired"
    },
    "relationships": {
      "browser": {
        "data": {
          "type": "browsers",
          "id": "3"
        }
      }
    }
  }
}
```

A sample response is:

```
HTTP/1.1 201 CREATED
Content-Type: application/vnd.api+json
```

```
{
  "links": {
    "self": "https://browsercompat.org/api/v2/versions?use_changeset=55"
  },
  "data": {
    "type": "versions",
    "id": "50",
    "attributes": {
      "version": "2.0",
      "release_day": null,
      "retirement_day": null,
      "status": "retired",
      "release_notes_uri": null,
      "note": null,
      "order": 3
    },
    "relationships": {
      "browser": {
        "links": {
          "self": "https://browsercompat.org/api/v2/versions/relationships/browser",
          "related": "https://browsercompat.org/api/v2/versions/browser"
        },
        "data": {
          "type": "browsers",
          "id": "3"
        }
      },
      "supports": {
        "links": {
          "self": "https://browsercompat.org/api/v2/versions/relationships/supports",
          "related": "https://browsercompat.org/api/v2/versions/supports"
        }
      }
    }
  }
}
```

```
        "related": "https://browsercompat.org/api/v2/versions/supports"
    },
    "data": []
},
"history_current": {
    "links": {
        "self": "https://browsercompat.org/api/v2/versions/relationships/
↪history_current",
        "related": "https://browsercompat.org/api/v2/versions/history_
↪current"
    },
    "data": {
        "type": "historical_versions",
        "id": "54"
    }
},
"history": {
    "links": {
        "self": "https://browsercompat.org/api/v2/versions/relationships/
↪history",
        "related": "https://browsercompat.org/api/v2/versions/history"
    },
    "data": [
        {
            "type": "historical_versions",
            "id": "54"
        }
    ]
}
}
}
```

Finally, create the support:

```
POST /api/v2/supports?use_changeset=55 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 396
Content-Type: application/vnd.api+json
```

```
{
    "data": {
        "type": "supports",
        "relationships": {
            "version": {
                "data": {
                    "type": "versions",
                    "id": "50"
                }
            },
            "feature": {
                "data": {
                    "type": "features",
                    "id": "6"
                }
            }
        }
    }
}
```

```

        }
    }
}
```

A sample response is:

```
HTTP/1.1 201 CREATED
Content-Type: application/vnd.api+json
```

```
{
  "links": {
    "self": "https://browsercompat.org/api/v2/supports?use_changeset=55"
  },
  "data": {
    "type": "supports",
    "id": "29",
    "attributes": {
      "support": "yes",
      "prefix": null,
      "prefix_mandatory": false,
      "alternate_name": null,
      "alternate_mandatory": false,
      "requires_config": null,
      "default_config": null,
      "protected": false,
      "note": null
    },
    "relationships": {
      "version": {
        "links": {
          "self": "https://browsercompat.org/api/v2/supports/relationships/
↪version",
          "related": "https://browsercompat.org/api/v2/supports/version"
        },
        "data": {
          "type": "versions",
          "id": "50"
        }
      },
      "feature": {
        "links": {
          "self": "https://browsercompat.org/api/v2/supports/relationships/
↪feature",
          "related": "https://browsercompat.org/api/v2/supports/feature"
        },
        "data": {
          "type": "features",
          "id": "6"
        }
      },
      "history_current": {
        "links": {
          "self": "https://browsercompat.org/api/v2/supports/relationships/
↪history_current",
          "related": "https://browsercompat.org/api/v2/supports/history_
↪current"
        },
        "data": {
```

```
        "type": "historical_supports",
        "id": "32"
    }
},
"history": {
    "links": {
        "self": "https://browsercompat.org/api/v2/supports/relationships/
↪history",
        "related": "https://browsercompat.org/api/v2/supports/history"
    },
    "data": [
        {
            "type": "historical_supports",
            "id": "32"
        }
    ]
}
}
}
```

The historical_versions and historical_supports resources will both refer to changeset 56, and this changeset is linked to feature 6, despite the fact that no changes were made to the feature. This will facilitate displaying a history of the compatibility tables, for the purpose of reviewing changes and reverting vandalism.

Updating View with PATCH

view_features supports PATCH for bulk updates of support data. Here is a simple example that adds a new subfeature without support:

```
PATCH /api/v2/view_features/5 HTTP/1.1
Host: browsercompat.org
Accept: application/vnd.api+json
Authorization: Bearer xxQLNiTUFjRL5En8nBWzSDc5tLWkV2
Content-Length: 590
Content-Type: application/vnd.api+json
```

```
{
    "data": {
        "id": "5",
        "type": "features"
    },
    "included": [
        {
            "type": "features",
            "id": "_New Subfeature",
            "attributes": {
                "slug": "web-css-float_new-subfeature",
                "name": {
                    "en": "New Subfeature"
                }
            },
            "relationships": {
                "parent": {
                    "data": {
                        "type": "features",

```

```

                "id": "5"
            }
        }
    ]
}

```

A sample response is:

```
HTTP/1.1 200 OK
Content-Type: application/vnd.api+json
```

```
{
  "links": {
    "self": "https://browsercompat.org/api/v2/view_features/5"
  },

The response is the feature view with new and updated items, or an error response.

This is a trivial use case, which would be better implemented by creating the feature directly, but it can be extended to bulk updates of existing feature views, or for first-time importing of subfeatures and support data. It has some quirks:

- New items should be identified with an ID starting with an underscore (_). Relations to new items should use the underscored IDs.
- Only feature, reference, section, and support resources can be added or updated. Features must be the target feature or a descendant, and other resources must be restricted to those features or a valid new feature..
- Deletions are not supported.
- Other resources (browsers, versions, etc) can not be added or changed. This includes adding links to new resources.

Once the MDN import is complete, this PATCH interface will be deprecated in favor of direct POST and PATCH to the standard resource API.

Services

Note: This project has been cancelled, and this information is historical.

A **Service** provides server functionality beyond basic manipulation of resources.

Authentication

Several endpoint handle user authentication.

<https://browsercompat.org/accounts/profile/> is an HTML page that summarizes the users' account, which includes:

- The username, which can't be changed.
- Changing or setting the password, which is optional if a linked account is used.
- Viewing, adding, and removing linked accounts, which are optional if a password is set. The support linked account type is [Firefox Accounts](#).
- Viewing, adding, and removing emails. Emails can be verified (a link is clicked or a trusted linked account says it is verified), and one is the primary email used for communication.

Additional endpoints for authentication:

- /accounts/ - Redirect to login or profile, depending on login state
- /accounts/signup/ - Create a new account, using username and password
- /accounts/login/ - Login to an existing account, using username and password or selecting a linked account
- /accounts/logout/ - Logout from site

- /accounts/password/change/ - Change an existing password
- /accounts/password/set/ - Set the password for an account using only a linked account
- /accounts/email/ - Manage associated email addresses
- /accounts/password/reset/ - Start a password reset via email
- /accounts/social/connections/ - Manage social accounts
- /accounts/fxa/login/ - Start a Firefox Accounts login

OAuth2 Authentication

A user can register an OAuth2 client application, and then use that application to provision bearer tokens on behalf of users. *OAuth2 Simplified* is a technical but gentle introduction to OAuth2. The [OAuth2 website](#) is a decent starting point for learning how OAuth 2.0 works and finding some (older) client libraries, and the [OAuth2 specification](#) has details on the protocols.

Back-End Applications

When the application is going to run on a server or a local machine, it is possible to keep a client secret secure, and authenticate the client to the server using this secret.

The steps are:

1. Setup your OAuth2 Confidential Client Application
2. Request an authorization code for your user
3. Exchange the authorization code for an access token
4. Use the access token to access the API
5. Refresh the access token as needed

Setup Application

First, log into the API and go to your profile page (/accounts/profile/, linked under your username in the title bar).

Next, select “Apps” from the profile menu, going to /oauth2/applications/. Select “New Application”.

Fill in the form:

- Name - A descriptive name, or your website URL. This will be displayed to your users.
- Client ID - Keep the generated value
- Client secret - Keep the generated value
- Client type - Confidential
- Authorization grant type - Authorization code
- Redirect uris - One or more redirect URIs owned by your client application. This could be a localhost URI for development, and/or a URI on your deployed website.

Select Save.

Request Auth Code

When you need to make an authenticated request on behalf of a user, start the process by requesting an authorization code.

Redirect the user to the authorization endpoint (broken up to show query parameters):

```
https://browsercompat.org/oauth2/authorize/?  
  response_type=code&  
  client_id=CLIENT_ID&  
  redirect_uri=REDIRECT_URI&  
  scope=read write
```

The user will login if they are not already logged in, and then asked if they want to authorize your application. If they say yes, your redirect URI will be called with the query string `?code=AUTHORIZATION_CODE`. If there was a problem, including the user denying access, then the query string will be `?error=ERROR_TYPE`. See the [Authorization Grant Error Response](#) section in the OAuth2 spec for possible error types.

Exchange for Token

So far, the communication has been over the internet in the user's browser. The backend server communicates directly with the authorization server to exchange the authorization code for an access token. The authorization code is valid for a short time.

The backend server POST to this URL:

```
https://browsercompat.org/oauth2/token/
```

with this form-encoded content:

```
grant_type=authorization_code&  
code=AUTHORIZATION_CODE&  
redirect_uri=REDIRECT_URI&  
client_id=CLIENT_ID&  
client_secret=CLIENT_SECRET
```

The authorization server will response with JSON:

```
{  
  "expires_in": 36000,  
  "token_type": "Bearer",  
  "access_token": "ACCESS_TOKEN",  
  "refresh_token": "REFRESH_TOKEN",  
  "scope": "read write"  
}
```

Access the API

When accessing the API on behalf of the user, include the access token in the Authorization header:

```
POST /api/v2/supports  
Host: browsercompat.org  
Content-Type: application/vnd.api+json  
Accept: application/vnd.api+json  
Authorization: Bearer ACCESS_TOKEN
```

```
{
  "data": {
    "type": "supports",
    "relationships": {
      "version": {
        "data": {
          "type": "versions",
          "id": "4"
        }
      },
      "feature": {
        "data": {
          "type": "features",
          "id": "6"
        }
      }
    }
  }
}
```

The command line tool `curl` can also be used. Let's say you wanted to add a note to the support with ID 1. If you place this JSON API request in a file named “`update.json`”:

```
{
  "data": {
    "type": "supports",
    "id": "1",
    "attributes": {
      "note": {
        "en": "Added a note"
      }
    }
  }
}
```

then this `curl` command will update the API:

```
curl -v -X PATCH
-H "Content-Type: application/vnd.api+json" \
-H "Accept: application/vnd.api+json" \
-H "Authorization: Bearer ACCESS_TOKEN" \
-d @update.json \
https://browsercompat.org/api/v2/supports/1
```

Invalid Tokens

The token can expire because the user revoked it (see the Token section of your profile in the API), or because the token expired. The access token has an expiration date of 36000 seconds (10 hours). When you try to use an invalid access token, you'll get an authorization denied response:

```
HTTP/1.0 401 UNAUTHORIZED
Content-Type: application/vnd.api+json
WWW-Authenticate: Bearer realm="api"
```

```
{  
  "errors": [  
    {  
      "detail": "Authentication credentials were not provided.",  
      "status": "401"  
    }  
  ]  
}
```

Refresh the Token

If a token is not revoked, you can use the refresh token to provision a new access token. POST to the token URL again (<https://browsercompat.org/oauth2/token/>), with the form data:

```
grant_type=refresh_token&  
refresh_token=REFRESH_TOKEN&  
client_id=CLIENT_ID&  
client_secret=CLIENT_SECRET
```

The response is another access token response, with a fresh access token and a fresh refresh token. A token can also be refreshed before the access token expires.

Front-End or Mobile Applications

For a front-end application, all the code is in JavaScript, and any secret would be included in the source code downloaded to the user's browser. Mobile applications, such as iPhone or Android applications, use compiled code, but any client secret would still have to be present in application code. Because of this, OAuth can't be used directly with client secrets, and thus the client can't authenticate itself to the server.

One way to retain authentication is to use an API proxy, where the application talks to a thin backend that handles the details of the OAuth2 protocol. See Alex Bilbie's post, [OAuth and Single Page JavaScript Web-Apps](#) for a discussion of why this is a good idea, and a sketch of how to implement it.

Because the API does not expose user's information, we allow the [Implicit Grant](#) authentication type, which does not authenticate the client, but relies on a predetermined client URL to accept tokens after user authentication.

The steps are:

1. Setup your OAuth2 Public Client Application
2. Request an access token for your user
3. Use the access token to access the API
4. Refresh the access token as needed

Setup Application

First, log into the API and go to your profile page (/accounts/profile/, linked under your username in the title bar).

Next, select “Apps” from the profile menu, going to /oauth2/applications/. Select “New Application”.

Fill in the form:

- Name - A descriptive name, or your website URL. This will be displayed to your users.

- Client ID - Keep the generated value
- Client secret - Keep the generate value
- Client type - Public
- Authorization grant type - Implicit
- Redirect uris - One or more redirect URIs owned by your client application. This could be a localhost URI for development, and/or a URI on your deployed website.

Select Save.

Request a Token

To request a access token, redirect the user to the authorization endpoint (broken up to show query parameters):

```
https://browsercompat.org/oauth2/authorize/?  
  response_type=token&  
  client_id=CLIENT_ID&  
  redirect_uri=REDIRECT_URI&  
  scope=read write
```

The user will login if they are not already logged in, and then asked if they want to authorize your application. If they say yes, your redirect URI will be called with a long fragment string:

```
https://yoursite.com/redirect#  
  expires_in=36000&  
  state=&  
  token_type=Bearer&  
  access_token=ACCESS_TOKEN&  
  scope=read+write
```

Your code will process the fragment string to extract the access token.

If there is an error, you will get a response like:

```
https://yoursite.com/redirect#error=access_denied
```

See the [Implicit Grant Error Response](#) section in the OAuth2 spec for possible error types.

Using the Token

To use the access code, add an `Authorization` header with the value `Bearer ACCESS_TOKEN`. See [Access The API](#) in the back-end client section for more details.

The token will eventually expire, and the API request will fail. See [Invalid Tokens](#) in the back-end client section for details. Implicitly granted tokens do not have an associated refresh token, and the user must return to the API to grant access again.

Data Browser

The Data Browser at <https://browsercompat.herokuapp.com/browse/> is an [Ember.js](#) single-page app that allows browsing the resources currently available in the API. It is built with Ember libraries that work with JSON API RC1.

Importer

The MDN Importer at <https://browsercompat.herokuapp.com/importer/> is used to scrape data from MDN, extract compatibility data, pinpoint data issues on MDN pages, and commit extracted data to the API.

Tools

Note: This project has been cancelled, and this information is historical.

Some potentially useful scripts can be found in the /tools folder:

download_data.py

Download data from API. Usage:

```
$ tools/download_data.py [--api API] [-vq] [--data DATA]
```

- `--api <API>` (*optional*): Set the base URL of the API (default: `http://localhost:8000`)
- `-v` (*optional*): Print debug information
- `-q` (*optional*): Only print warnings
- `--data <DATA>` (*optional*): Set the output data folder (default: data subfolder in the working copy)

This will create several files (browsers.json, versions.json, etc.) that represent the API resources without pagination.

import_mdn.py

Import features from MDN, or reparse imported features. Usage:

```
$ tools/import_mdn.py [--api API] [--user USER] [-vq]
```

- `--api <API>` (*optional*): Set the base URL of the API (default: `http://localhost:8000`)
- `--user <USER>` (*optional*): Set the username to use on the API (default: prompt for username)
- `-v` (*optional*): Print debug information
- `-q` (*optional*): Only print warnings

load_spec_data.py

Import specification data from MDN's SpecName and Spec2. Usage:

```
$ tools/load_spec_data.py [--api <API>] [-user <USER>]
                           [-vq] [--all-data]
```

- `--api <API>` (*optional*): Set the base URL of the API (default: `http://localhost:8000`)
- `--user <USER>` (*optional*): Set the username to use on the API (default: prompt for username)
- `-v` (*optional*): Print debug information

- `-q` (*optional*): Only print warnings

make_doc_requests.py

Make documentation/integration requests against an API. Used by tools/run_integration_tests.sh. Usage:

```
$ tools/integration_requests.py [--mode {display,generate,verify}]
    [--api API]
    [--raw RAW] [--cases CASES]
    [--user USER] [--password PASSWORD]
    [--include-mod] [-vq]
    [case name [case name ...]]
```

- **--mode {display,generate,verify}** (*optional*): Set the mode. Values are:
 - display (default): Run GET requests against an API, printing the actual requests and responses.
 - generate: Run all requests against an API. Throw away some headers, such as `Allow` and `Server`. Modify other headers, such as `Cookies`, to make them consistent from run to run. Standardize some response data, such as creation and modification times. Store the cleaned-up requests and responses in the docs folder, for documentation and integration testing.
 - verify: Run all requests against an API, standardizing the requests and responses and comparing them to those in the docs folder.
- **--api API** (*optional*): Set the base URL of the API (default: `http://localhost:8000`)
- **--raw RAW** (*optional*): Set the path to the folder containing raw requests and responses (default: `docs/raw`)
- **--cases CASES** (*optional*): Set the path to the documentation cases JSON file (default `docs/doc_cases.json`)
- **--user USER**: Set the username to use for requests (default anonymous requests)
- **--password PASSWORD**: Set the password to use for requests (default is prompt if `--user` set, otherwise use anonymous requests)
- **--include-mod**: If `--mode display`, then include requests that would modify the data, such as `POST`, `PUT`, and `DELETE`.
- **-v**: Be more verbose
- **-q**: Be quieter
- **case name**: Run the listed cases, not the full suite of cases

mirror_mdn_features.py

Create and update API features for MDN pages. This will create the branch features, and then import_mdn.py can be used to generate the leaf features. Usage:

```
$ tools/mirror_mdn_features.py [--api API] [--data DATA]
    [--user USER] [--password PASSWORD]
```

- **--api API** (*optional*): Set the base URL of the API (default: `http://localhost:8000`)
- **--user USER**: Set the username to use for requests (default is prompt for username)
- **--password PASSWORD**: Set the password to use for requests (default is prompt for username)
- **--data DATA**: Set the data folder for caching MDN page JSON

run_integration_tests.sh

Run a local API server with known data, make requests against it, and look for issues in the response. Usage:

```
$ tools/run_integration_tests.sh [-ghqv]
```

- **-g**: Generate documentation / integration test samples. If omitted, then responses are checked against the documentation samples. Useful for adding new documentation cases, or updating when the API changes.
- **-h**: Show a usage statement
- **-q**: Show less output
- **-v**: Show more output

upload_data.py

Upload data to the API. Usage:

```
$ tools/upload_data.py [--api API] [--user USER]  
                      [-vq] [--data DATA]
```

- **--api <API>** (*optional*): Set the base URL of the API (default: `http://localhost:8000`)
- **--user <USER>** (*optional*): Set the username to use on the API (default: prompt for username)
- **-v** (*optional*): Print debug information
- **-q** (*optional*): Only print warnings
- **--data <DATA>** (*optional*): Set the output data folder (default: data subfolder in the working copy)

This will load the local resources from files (`browsers.json`, `versions.json`, etc), download the resources from the API, and upload the changes to make the API match the local resource files.

Issues

Note: This project has been cancelled, and this information is historical.

The near-term goal is that compatibility data lives in the API rather than on the MDN page, and MDN contributors maintain this data in the API instead of editing wiki pages. As this plan is executed, limitations are discovered in API, and changes are made and deployed.

When MDN is using the API as the primary source of compatibility data, we'll increment the API version for backward-incompatible changes. Until then, the v1 and v2 APIs will be modified with the evolving design.

This page outlines planned changes in the API. It doesn't describe all the known bugs and issues - see [tracking bug 996570](#) for a detailed list.

API Tasks

Here are the planned tasks that will require code changes to the API:

- **Refactor Slugs** - Slugs were designed to be human-friendly aliases for resources, and also to be natural key alternatives to auto-incrementing IDs. However, whenever they are used for these purposes, they are found to have issues and require adjusting. For example, **Browser** slugs were adjusted to remove the “desktop by default” bias ([bug 1128525](#)). **Feature** slugs had issues when the MDN page had a title that bumped up against the 50 character limit ([bug 1078699](#)). Slugs will be modified to be changeable by privileged users, instead of being set once at creation time. They may also be expanded beyond 50 characters, become a list of optional aliases, and be renamed in some cases. 3rd party developers should not rely on slugs remaining constant for the life of the API.
- **Switch from Auto-Incrementing IDs to UUIDs** ([bug 1230306](#)) - Resources are accessed by IDs, which use the database’s auto-incrementing integers. This means that two instances of the API could have the same data available at different IDs. Tools currently use slugs and other “permanent” attributes to identify resources as the same, even when IDs change. This is error-prone, and since slugs are planned to change, it would be useful to use UUIDs instead, so that the ID becomes a strong identifier between API instances.
- **Recover deleted items** ([bug 1159349](#)) - The History API could be used to recover deleted items, by administrators or users. The API needs to be modified to allow the reversion PATCH to deleted resources.
- **Move to api.browsercompat.org** ([bug 1153329](#)) - <https://browsercompat.org> will be the user-facing contribution interface and data browser. <https://api.browsercompat.org> will be the application-facing interface. This may require renaming the github repository, moving paths, and dropping sample views.
- **Other v1/v2 API tasks** ([tracking bug 1240757](#)) - See this tracking bug for other issues assigned to the v1/v2 API milestone.
- **Known JSON API v1.0 issues** ([tracking bug 1243225](#)) - The v2 API is a partial implementation of the [JSON API v1.0](#) specification. There are known issues around optional functionality like sorting and including linked resources, as well as differences in error representations. See this tracking bug for known issues.

Data Tasks

Here are the planned tasks that involve adding or changing data in the API:

- **Add Feature IDs to MDN document data** ([bug 1240774](#)) - The mechanism for including a Compatibility table on MDN is evolving. The latest idea is that the Feature ID will be stored in the MDN document model, so that the existing parameterless KumaScript can be used to inject the table. There are open design questions, such as how the IDs will be set, if they need to change, and, if so, who will change them and how.
- **Import Data from MDN** - The majority of the project work has been building a scraper capable of importing existing data from MDN. As of September 2015, the scraper can extract data from most MDN pages, and can pinpoint issues that require page changes. The scraped data has to be committed to the API, and this process is ongoing.
- **Populate Browser Version Data** - MDN has detailed information for Firefox releases, and much less for other browsers. The **version** model supports some data, such as a release date, a retirement date, and URLs for release notes. Versions can also be sorted with respect to the related **browser**. This information can’t be imported, and must be entered into the API. Some sources for this data include:
 - Google Chrome - [Google Chrome Release History](#) on Wikipedia
 - Mozilla Firefox - [Firefox Release History](#) on Wikipedia and KumaScript macro `CompatGeckoDesktop`
 - Microsoft Internet Explorer - [Release History of IE](#) on Wikipedia
 - Opera - [Current Opera version history](#) and [Presto history](#) on opera.com
 - Safari - [Safari version history](#) on Wikipedia

Future Tasks

Once MDN is using the API as the primary data source for compatibility data, we can move on to other goals.

This includes, but is not limited to:

- Supporting other relations between resources. For example, the CSS property `color` can be assigned a CSS color type such as `color=red`. The CSS property `background-color` can also be assigned CSS color types. Different browsers may support a different set of named colors. This relation can't be directly represented in the API, but can be partially modeled with HTML links.
- Support test-driven compatibility data. This is generated by browser vendors and standardization supporters, and can be implemented as separate applications using the compatibility API.

Bugzilla Archive

BrowserCompat bugs were tracked in Bugzilla, and closed WONTFIX. These were the open bugs at the time the project was cancelled:

- **996570: Create a data store for compatibility data**
 - [1078699](#): Resources are accessible by slug
 - [1153329](#): Rename project to match browsercompat.org
 - [1159344](#): Reverting a browser should attempt to revert versions order
 - **1159349: Allow reverting deletes**
 - * [1229785](#): No HTTP 410 error page
 - [1159363](#): Add Location header to resource-creating POST responses
 - [1168455](#): Add general email server to browsercompat.herokuapp.com
 - [1170214](#): Limit notes to HTML subset
 - [1171988](#): Restrict API actions by role
- **1181140: [Compat Data][Importer] Improve MDN importer, Round 3**
 - * **1134584: Firefox OS 1.0.1 is not being accepted as a valid version**
 - [1230584](#): Improve browsable API for creating and updating resources
 - * [1180573](#): Standardized flag is wrong
 - * [1198985](#): Adjust handling of `<pre>` tags with brush class
 - [1195467](#): A version should be unique for a browser
 - [1197210](#): Allow adding new MDN feature pages
- **1199483: Implement Correct Labels on Chrome Browser Table**
 - * **1240101: C&M GUI - display and edit browser and version**
 - [1195467](#): A version should be unique for a browser
 - [1219915](#): [Compat] Create macros to import “`requires_config`” correctly
 - [1219927](#): [Compat] Create macros to import “`alternate_name`” correctly
 - [1219945](#): [Compat] Create macros to import “`protected`” correctly
- **1224345: Validation errors on view_feature become ISEs**

- * 1230306: Switch to database-independant IDs
- 1230592: Logging into API should return to the pre-login page
- 1230615: Add /Add-ons to MDN feature set
- **1240757: Implement v1/v2 API**
 - * 1195518: upload_data tool fails with data_id collision on existing database
 - * **1229170: [stage] visiting /v1/view_features/fox causes a SystemExit exception**
 - 1230584: Improve browsable API for creating and updating resources
 - * 1230306: Switch to database-independant IDs
 - * 1230584: Improve browsable API for creating and updating resources
 - * 1230597: Add permission for changing slugs
 - * 1242981: Use instance cache for v2 API related links
 - * 1251252: Allow empty Section names
- **1240785: Convert required feature.slug to optional feature.aliases**
 - * 1230597: Add permission for changing slugs
- 1242606: Some pages not re-imported by import_mdn tool
- 1242960: Restrict DELETE on changesets
- 1242982: Use instance cache for v2 relationship links
- **1243225: Fully implement the JSON API v1.0 specification as the v2 API**
 - * 1240757: Implement v1/v2 API
 - * **1242649: Error responses should use “source” attribute, JSON Pointers**
 - 1240757: Implement v1/v2 API
 - * 1242664: Implement POST/DELETE for updating to-many relations
 - * 1242703: Pagination links are in wrong place for /api/v2/view_features/<id>?child_pages=1
 - * **1242959: v2 API should not support PUT**
 - 1230584: Improve browsable API for creating and updating resources
 - * 1243190: Support “include” parameter
 - * 1243195: Support “sort” parameter
 - * 1243205: Support updates through related links in a v2 API
 - * 1243217: Return 409 Conflict when type and id do not match URL in v2 API
 - * 1252973: Support “fields” parameter
- **1243399: Automate MDN data scraping**
 - * 1247974: [Importer] Scrape Mozilla/Firefox_OS/API directory
- 1244702: C&M GUI - Provide a basic auth UI for admin
- 1246192: Extract localizable strings from API user interfaces

History

The BrowserCompat API project has been cancelled. Here are some development milestones:

- 2017-04-24 - Begin the process of removing the beta integration
- 2016-02-16 - Last code written
- 2015-12-01 - MDN beta users can see API-backed tables on select pages
- 2015-09-11 - 3rd re-write of MDN importer ships, 82% of MDN can be imported
- 2015-02 - Added MDN importer
- 2014-12 - Added rest of resources, sample displays. Dropped versioning pre-release.
- 0.2.0 - 2014-10-13 - Add features, supports, pagination
- 0.1.0d - 2014-09-29 - Add resource-level caching
- 0.1.0c - 2014-09-16 - Add sample feature view, simplify draft API
- 0.1.0b - 2014-09-05 - Add filtering, more JSON API tuning.
- 0.1.0a - 2014-09-02 - First Heroku deployment. Browser and Version data.
